

Railtalk Magazine

Issue 121 | October 2016 | ISSN 1756 - 5030

Welcome

Welcome to Issue 121 and your monthly roundup from across the UK.

Issue 121 is finally here and may I firstly thank everyone for their feedback on the new magazine style. It's always great to hear from readers and we are glad to know we are moving in the right direction. As always, we are still tweaking the layout of the magazine, so any more feedback you may have will be gratefully received.

Moving on and how quickly has September gone, also I'm noticing that the light is fading rapidly. However, that can only mean one thing, yes spoiler alert for the next page, however the RHTT Season is finally upon us and for everyone in Yorkshire it means we look forward to daily Class 20 action across the county. Not to rub it in for everyone outside of Yorkshire operating area though, but for a brief few weeks a year I can sit at my desk in my office and watch (and more importantly listen) to Class 20s passing by.

Now I cannot not mention the fantastic tour GBRf ran over the 4 days from the 8th until the 11th of September to mark their 15 years of operations here in the UK. More importantly, what a fantastic amount of money raised for a good cause and I hear a brilliant time was had by everyone involved, both passenger and staff.

Front Cover

On September 11th, Class 87 002 hauls the 'GBRf 15' charity railtour 1Z15 Edinburgh - Liverpool Lime St. over the viaduct at Carr Mill Dam. *Dave Harris*

This Page

Very wet conditions on September 3rd as LMS 7P Class 4-6-0 No. 46115 'Scots Guardsman' works through Beckfoot with the northbound CME. *Shep Woolley*

Next Page

Autumn is here as Class 20 312, 20 308, 20 305, and 20 303 head to York from Barrow Hill on October 1st, to commence RHTT duties. *Richard Hargreaves*

Finally, similar to David's introduction in Xtra this month, I also visited mainland Europe in September, specifically the Czech Republic or "Czechia" as I think we are now suppose to call it. Well what can I say about the place, just that if you have never been, it really is worth a visit. Their railways aren't perfect, however you do sense pride in the staff of what they have. Station Masters still look after their stations, greeting both stopping trains and those that pass through and generally enjoy their job. For many it is a job for life, as virtually all staff ID badges show photos from 20+ years ago thus meaning that for those individuals it truly has been a job for their working life. Also many of the drivers spend extended stops, cleaning locomotives' windows and exteriors.

Furthermore, there seems to be a great acceptance and appreciation for the railways, something I feel we just don't have in the UK from the general public. It's portrayed in the media as a nuisance and an obstacle and very little of our main stream media ever cover the positives of UK railways.

The one lasting memory of the trip has to be on the way back into Prague behind one of the popular 'Grumpy' locomotives. We slowed to a halt on the approach to a level crossing, and on looking outside the window there were around 50 people stood around the crossing with a 'End of summer 2016' banner for the locomotive, with a finish line style banner across the line for our train to pass through, which the driver duly obliged on. Something sadly I feel in the UK would involve too much of the wrong type of tape.

Anyhow until next Month. Enjoy the Magazine.

DB Cargo

▶ The Roxby spoil train continues its weekly appearance, and on September 1st it produced a respectably clean Class 66 058, seen at Frodingham Jct. leading 6D29 empties back to Belmont. *Steve Thompson*

▶ A desperately dull morning of September 20th, sees Class 66 151 toiling up to the station with its loaded RDT in tow on 6D75 Scunthorpe Trent Yard - Doncaster Up Decoy. *Steve Thompson*

▶ Class 60 100 hauls the 6E68 back to Humber Refinery from Kingsbury, through Scunthorpe on September 25th, don't try counting the vehicles, there's 32 of them. *Steve Thompson*

DB Cargo

On August 30th, Class 66 097 passes through Scunthorpe station working the 6H77 Immingham - Drax Biomass, trains now made up to 25 IIAs. *Steve Thompson*

Class 66 095 hauling the 6D29 Roxby - Belmont spoil empties comes off the King George V Bridge at Althorpe on September 8th. *Steve Thompson*

All action at Lincoln High Street as East Midlands Trains' Class 156 498 arrives at Central working the 2L75 from Leicester as Class 66 104 makes a belated run through on 6V29 scrap train from Terrace Sidings to Cardiff Tidal Sidings, the only freight traffic generated by the city. The view, less than pristine, is from the new footbridge and taken through the, quite clean, glass screen. *Steve Thompson*

DB Cargo

▶ The 04:28 Coatbridge F.L.T. to Daventry International Railfreight Terminal passes through Tamworth behind Class 66 171 on September 7th. *Derek Elston*

▶ On September 5th, a bit of clag from Class 60 019 as it hauls the 6T89 Immingham RS - Doncaster Up Decoy, comprising 19 Seacow ballast hoppers, passing here through Scunthorpe. *Steve Thompson*

DB Cargo UK provides one-stop-shop transport solution for Certas Energy

DB Cargo UK has provided Gulf Aviation with a full logistics solution to move aviation fuel from Edinburgh to Derby.

The rail freight operator has agreed a three year contract with Gulf Aviation, part of Certas Energy, to transport the fuel and provide the specialist wagons needed to carry it.

The service moves the fuel from the Grangemouth Refinery near Edinburgh to Derby.

Certas Energy, the largest independent fuel and lubricant distributor in the UK, already uses DB Cargo UK's services to transport fuel from Grangemouth Refinery to Fort William and Lairg in Scotland. The new contract demonstrates the success of the collaboration between the two companies.

Dorian Davies, Account Manager, Chemicals at DB Cargo UK, said: "This new service strengthens the relationship that we have with Gulf Aviation, a valued customer of DB Cargo UK. We

take pride in offering our customers services that meet all of their requirements, whether this is a service from A to B or a full logistical solution."

Alex Murphy, Head of Gulf Aviation commented:

"At Gulf Aviation, we take great pride in the high level of service we offer to our customers and we know that DB Cargo UK have similar standards hence our collaboration with them."

▶ Class 66 599 passes Upper Battlefield hauling the 6Y42 14:26 Crewe Basford Hall - Severn Tunnel Jct. on September 16th. *Keith Davies*

▶ On September 8th, Class 90 045 with a Felixstowe - Crewe freightliner, passes through Stafford. *Michael Lynam*

▶ On September 3rd, 6Z11 was the second of two wagon-turning moves from Immingham Bulk Terminal to Marsh Jn, via Barnetby outward and the Habrough - Ulceby chord the return. The first trip had taken 6 wagons, but this one, topped and tailed by Class 66 603 and 66 602, had just two! Viewed in the rain at Habrough is the outward leg. *Steve Thompson*

Freightliner

▶ On September 6th, Class 66 594 is in a sylvan setting as it creeps along E Line at Scunthorpe with 6E53 Ipswich SS - Immingham SS.
Steve Thompson

▶ Class 70 005 departs Crewe Basford Hall on September 20th, with a Coatbridge - Daventry intermodal. *Michael Lynam*

▶ Class 66 509 heads through Acton Bridge on September 11th, hauling a return ballast working to Crewe Basford Hall.
Brian Battersby

Freightliner

▶ Class 66 603 and 66 544 head past Walcot on September 23rd working the 06:00 Severn Tunnel Jct. - Bescot ballast. *Phil Martin*

▶ On September 5th, Class 66 528 arrives into Scunthorpe Up Goods, prior to running round working 6C75 Immingham - CHP. *Steve Thompson*

▶ Class 90 044 departs Basford Hall on September 20th with a Crewe - Felixstowe working. *Michael Lynam*

GBRf

▶ Class 66 727 in its new livery and name, passes through Whittlesey on September 27th heading from Felixstowe North to Birch Coppice. *Geoff Barton*

▶ Class 66 715 passes through Stafford on September 8th with a mixed rake of wagons heading from Toton - Crewe. *Michael Lynam*

GBRf

Class 20 905 and 20 314 (with 20 107 and 20 096 on the rear) pass Wichnor Jct. with the 7X09 11:32 Old Dalby - West Ruislip on September 14th. *Keith Davies*

Most lunchtimes two GBRf Biomass workings pass through the historic Earlestown station. Here is the first one of the day on September 23rd as Class 66 703 heads the 4M37 09:54 empty working from Drax to Liverpool Biomass Terminal. *Jeff Nicholls*

No prizes for guessing the location of Class 66 708 'Jayne' as it heads towards the curve which will take it towards Winwick Junction with 6E10, 11:38 Liverpool Biomass Terminal - Drax GBRf working on September 23rd. *Jeff Nicholls*

GBRf

On September 21st, Class 66 750 approaches Skipton with the 6D72 Hull Dairycoates to Rylstone Tilcon empty stone train.
Michael Lynam

Comparatively rare at Scunthorpe at the moment, on September 5th Class 66 723 passes through the station with 6D60 empty JNAs from Immingham Mineral Quay to Doncaster Down Decoy.
Steve Thompson

Class 66 726 passes Skipton on September 21st hauling the 6M33 Acrow Quarry - Pendleton stone train.
Michael Lynam

Class 66718 heads out of the loop at Woodhouses hauling the 6M83 10:51 Tinsley Yard - Bardon Hill on September 15th. *Nick Clemson*

GB Railfreight celebrates 15 years of operations with record breaking train tour

GB Railfreight (GBRf) has raised a record £125,100 for its selected charities, following a four-day charity charter train tour of the UK. The achievement marks 15 years of operations for the company.

Starting on 8th September, the tour saw passengers travelling to an extensive array of locations across the UK, including Swanage, Harwich, Inverness and Liverpool, being hauled by locomotives that included Class 87, Class 59, Class 20s and the famous 'Evening Star'.

The tour itinerary was as follows:

8th September – Victoria > Swanage > Kings Cross (Class 20s, Class 73/1s)

9th September – Kings Cross > Whitmoor > Peterborough > Norwich > Great Yarmouth > Harwich (Class 73/9s, Class 66)

Overnight 9th/10th September – Harwich >

Edinburgh (Class 86)

10th September – Edinburgh > Aberdeen > Inverness > Edinburgh (Class 20s, Class 47)

11th September – Edinburgh > Preston > Liverpool > Doncaster > Peterborough > Paddington > Reading (Class 87, Class 59, Class 92, 'Evening Star')

This large programme was led by Business Manager for Infrastructure and Rail Services Paul Taylor, Account Manager for Rail Services Dale Williams, and Train Planner Richard Owen, who set plans in motion over a year ago. Over 30 additional GBRf staff volunteered to work in their own time across the four days and on a "not-for-profit" basis.

The freight operator was supported by their suppliers Harry Needle Railway Company, Riviera and Colas Rail, and infrastructure provider Network Rail, in order to make the tour a

possibility.

The charter train tour forms part of the freight operator's year-long fundraising efforts for The British Heart Foundation, Working Homes and The Ripple Project.

John Smith, Managing Director of GB Railfreight, said:

"Every year, our staff and their families go that extra mile to raise funds for our nominated charities. With this four-day charter tour, Paul Taylor and his team took it that stage further. The culmination of two years' worth of discussions and over a year of planning, they came up with a programme that, when tickets went on sale, almost sold out within the first 24 hours. I'd like to thank the GBRf staff and all of our suppliers, who helped make the charity charter tour happen, raising a record figure of £125,100. I can't begin to imagine what the team will come up with next to build on these achievements."

Virgin Trains offers bookings up to 6 months in advance to persuade more people to switch to rail

Virgin Trains has extended its booking horizon from the industry standard of three months to six months in advance for weekday tickets on both its west coast and east coast routes.

This gives customers more time to plan holidays and secure great deals, and book tickets for big events further ahead.

Groups booking family holidays and stag do's or school trips are likely to be amongst those who benefit from the changes.

This is the latest in a series of moves by Virgin Trains to tempt people away from air travel including the new Beam streaming

service allowing passengers to access hours of free films and TV series straight onto their devices.

Tickets from London – Glasgow are available from as little as £20 and London-Edinburgh from £25 allowing customers to travel from city centre to city centre, cutting overall journey times and maximising productive time on-board with Wi-Fi or relaxing with a movie.

Graham Leech, Group Commercial Director at Virgin Trains said: "We want leisure and business passengers to choose to travel by train and we're confident that this extended booking

horizon combined with everything else we have to offer will persuade more people to switch from the inconvenience of air travel to the comfort of our trains."

Thanks to already shorter journey times and an improved service, Glasgow-London journeys tripled in the years between 2009 and 2015. On the east coast, Virgin Trains has announced more frequent trains to Edinburgh with an extra 22,000 seats per week, whilst investing £40M into providing a better service including a new James Martin menu and refurbished trains. Customers booking directly on VirginTrains.com or VirginTrainsEastCoast.com will benefit from no booking fees.

James Martin menu wins most innovative caterer award

Virgin Trains on the east coast took home the coveted 'Most Innovative Caterer' award in the Onboard Retail Category at the annual International Rail Catering Group awards.

The menu includes award winning dishes such as lemon and herb roasted chicken and flavoursome chicken curry developed in the chef's kitchen. James Martin also developed an exclusive range of jams produced by Yorkshire based The Fruity Kitchen and a premium Black Pudding served at breakfast in the full-English.

Alison Watson, Head of Customer Experience for Virgin Trains on the east coast said: "We are so pleased to see our menu get the recognition it deserves at the International Rail Catering Group awards. We believe in providing an outstanding service to our customers onboard and working with James Martin to develop this menu has been a key part of this."

"This is another step in Virgin Trains' journey of improving every element of our customers' experience when they travel with us. Our new First Class carriages are rolling out on a weekly basis now and our Azuma trains are being prepared to the highest spec in anticipation of future customer needs."

James Martin, whose roots hail back to York - a key stop on the Virgin Trains east coast service, commented: "Virgin Trains came to me with a genuine vision and passion for improving the experience they deliver to their customers and - as a frequent Virgin Trains traveller - I shared their belief that the food on offer could have a real impact on customers' experience as a whole."

Power car No. 43319 leads a diverted Leeds to Aberdeen service through Perth on September 10th. *Richard Jones*

Virgin Trains East Coast

Power car No. 43320 heads nonstop through Doncaster leading the 09:52 Aberdeen - London Kings Cross service on September 13th.

Virgin Trains brings customer call centre and new jobs to Newcastle

Virgin Trains has opened a new customer call centre in Newcastle, creating up to 85 new jobs in the city.

The company's Customer Solutions Centre is designed to improve customer service by bringing roles in-house and with employees working and travelling along its east coast route.

The centre is based at Virgin Money's Headquarters, in Gosforth, and will handle a range of customer inquiries, including bookings, special assistance, delay repay and customer feedback.

The opening was welcomed by business and civic leaders.

Newcastle City Council leader Nick Forbes said: "It is great to see Virgin further establishing itself in

Newcastle, bringing more jobs and careers to our city. "Not only does the North East have strong historical links to the railways and the East Coast Main Line, but, as these new jobs will demonstrate, the line continues to play an important role in our regional economy. Staff who know and use the line themselves will be an asset to both Virgin Trains and Newcastle and I welcome this news."

Jonathan Walker, Head of Policy and Campaigns for the North of England Chamber of Commerce, said: "We're delighted that Virgin Trains is making this commitment to the North East. This decision is a testament to the region's reputation for friendliness and diligence, which makes us a natural home for high quality customer service operations." David Horne, Managing Director of Virgin Trains, said: "We're really pleased to open our new Customer Solutions Centre

in Newcastle and to bring around 85 jobs to the city. "This is great news for Newcastle and the North East region. The customer is at the heart of everything we do, and so enhancing our customer service through a dedicated team, who work, live and travel on our east coast route, will ensure we provide a consistently high level of quality.

"These new skilled jobs are also very important to our business, as we prepare for a new era in rail travel on the east coast route with the introduction of 65 brand new Virgin Azuma trains in 2018."

Stations are first stop for gifts and gadgets

New retail sales results released by Network Rail show that 204 million people passed through the company's managed stations between April and June this year, comparable to the total population of Brazil (206.6 million).

Overall like-for-like sales for the quarter increased by 4.14%, more than eight times greater than the British Retail Consortium results for the same period, which were 0.5%. Almost one in three station users (64 million) visited Network Rail station retailers in the period, equivalent to the total population of the UK (64.6 million) and enough to fill Wembley Stadium over 700 times.

Food and beverage outlets in Network Rail's managed stations are proving increasingly popular with sales rising by 6.1% overall compared to the same period last year. While traditional retail sales also continue to grow, increasing by 2.5%.

Sales at major stations in London (King's Cross +8.7%), and across the country (Manchester +9.6% and Reading +10.2%) performed well, pointing to the ongoing changes in consumer shopping habits as more people look for central locations to meet, eat, shop and travel.

The like-for-like increase was also driven by three key growth areas in the second quarter of 2016. Year-on-year gifting purchases soared by 43.6%, suggesting stations are becoming a major destination for gifts on the go, whilst technology sales grew by 20.6%.

Accessories completed the top three with 10.2% growth over the three-month period.

It is not just travellers buying more gifts, gadgets and jewellery that have helped Network Rail station retailers record a 17th consecutive quarter of sales growth. Alongside these strong figures for higher value purchases, were the daily journey type purchases, with visitors to stations around the UK buying the equivalent of 4.5 million cups of coffee.

To coincide with the release of these figures, Network Rail Property, the company's commercial division, announced the appointment of Daniel Charles as the organisation's new Head of Retail. He will join in October from the Abu Dhabi Airports Company, where he was Head of Retail for almost two and a half years. Prior to this role he worked as a Senior Category Manager at Network Rail for seven years.

David Biggs, Network Rail's managing director of property, said: "These figures show that the quality retail offering at Network Rail stations is driving strong customer traffic to the many shops, cafes and boutiques that stations now have to offer. That's good news for shoppers and good news for passengers too. All profits from retail sales are reinvested back into the railway, helping fund the Railway Upgrade Plan."

Fares Advice with RailUK

This month more questions and answers on the complex ticketing system of Britain's Railways.

NRCoC replaced by NRCoT from 1/10/2016

The NRCoC are being replaced with effect from 1st October by the NRCoT.

A: Some of the updated information panels are quite useful, e.g. having this in writing:

Quote: This means that you should buy a ticket from the conductor on the train if there is one available; at an interchange station provided there is sufficient time before your connecting service; or, if neither of these is possible, at your destination.

Quote:: Restrictions may be applied to services departing or arriving at certain times; to the services of one or more specified Train Companies; or to groups of train services indicated by a particular brand name or identity. Details will be shown with your ticket and may be supplemented by announcements.

This next one is quite useful, as it basically says any route given by the NRE planner is correct.

Quote: The National Rail Journey Planner lets you select any specific journey, and allows you to include specific locations you wish to travel through. It will display valid tickets for your chosen journey alongside the train times.

*The new wording of 19(c) (now 14.2) is interesting. It seems to have a few gaps in it - specifically that it could be interpreted to read that (a) only a combination of two tickets is permitted, no more; (b) that the second ticket can be anything e.g. another Season; (c) that a 14.2 split is only allowed where the tickets *do not* overlap. I'm certain the latter is not intentional but I'm equally certain it will be misused. I suspect (a) and (b) are also not intentional.*

Quote: 14.2 If you are using a Season

Ticket, daily Zonal Ticket, or another area based Ticket such as a concessionary pass, ranger or rover in conjunction with another Ticket and the last station at which one Ticket is valid and the first station that the other Ticket is valid are the same, then the train does not need to call at that station for your combination to be valid.

Upgrading to 1st must, unless the TOC says otherwise, now be done before boarding unless there was no opportunity to do so (I guess). This was previously only the case in PF areas.

Quote: 15.3 A standard class Ticket can in most cases be upgraded to first class. Where this is the case you should pay the additional fare due before you board the train. The amount you pay will be the difference between the fare you have already paid and the appropriate first class fare for the journey you wish to make.

15.4 Some Train companies allow you to upgrade on train on payment of a supplement. Where this is the case it will be made clear by announcements or notices

This is quite a good explanation:

Quote: 16.2 Most Tickets allow you to break your journey. This means that you do not have to make the whole of your journey at the same time or, where allowed, on the same day.

16.3 Where a break of journey is allowed, there is no limit to the number of times that you can do so within a Ticket's period of validity, until the journey is completed.

There are so many more, see the RailUK forum for in depth analysis of these new rules.

Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! See you there!

◀ Tornado's run through Sonning Cutting on September 8th was 'probably' the last daylight trip with steam before electrification masts obscure the view. As you will see from the photo, posts are already in place under the A4 road bridge and at the far end of the cutting.
Ken Livermore

Rail boss calls for business to do more to fund rail improvements

Mark Carne, chief executive of Network Rail, has called for business to play a much bigger role in helping fund rail projects and improvements.

Speaking at a London First event, Mark Carne said: "Railways are not just important because more and more people are choosing to use them, they are also a major driver of economic growth. We know that rail can unlock housing supply to bring communities that have traditionally been cut off within reach of major urban conurbations. Just yesterday we announced that we have identified almost 200 sites across the country which will deliver almost 12,000 new homes, and we are continuing to review our land assets to see what more we can do. All over the country, we have seen the impact of rail improvements, new stations, new lines. When railways are introduced or upgraded, investment in housing inevitably follows as businesses choose to move or set up in or near those areas. We know that rail investment, such as transforming stations, can drive regeneration. But we cannot continue to rely on public funding to do so. It is clear that we need to increasingly source funding from those people, authorities and businesses that directly benefit from better railways."

During the speech Mr Carne highlighted the relative success of Britain's railway:

- A doubling of passenger numbers over the last two decades
- 40% cut in the cost of running the railway in the last decade
- The safest major railway in Europe

Mr Carne acknowledged how running more and more services to respond to demand had led to

serious congestion on many important routes, especially at peak times, and how this has had a significant impact on being able to run a reliable and punctual service.

Speaking about what Network Rail needs to do to deliver a better railway, he said: "Network Rail is transforming to put the customer at the heart of everything we do. We may be a public-sector organisation, but my vision is that we behave like a private sector business – relentlessly customer focussed, cost-competitive, commercial and with a high-performance culture

and a plan to deliver a railway fit for the future. Transformation is not a choice, it is a necessity."

Looking to the future, Mr Carne outlined how, with passenger numbers predicted to double again within 25 years, he plans to be able to run many more trains on the current infrastructure without the need to build new infrastructure that would cause huge disruption to passengers and local communities and businesses. Instead Mr Carne outlined how using tube-like digital signalling technology (similar to that which has revolutionised the Victoria and Jubilee lines in London) many more trains could be run on existing tracks.

Mr Carne said: "We need to accelerate the transition to digitally run railways so we can unlock the benefits before the network is gridlocked."

"This will be the biggest transformation in the history of Britain's railways. And I consider it a national imperative."

First anniversary is one in a million for Borders Railway

Over a million passenger journeys have been made on the Borders Railway since it officially opened 12 months ago on September 9 2015. The new figure was announced by Transport Minister Humza Yousaf and ScotRail Alliance managing director Phil Verster at a special event at Edinburgh Waverley to mark the line's first birthday. Borders, which is the longest new line built in the UK for over a century, was officially opened by Her Majesty the Queen on Wednesday, September 9, 2015.

Mr Yousaf and ScotRail Alliance staff were joined by passengers and local businesses from along the line of route to celebrate the positive economic and social impact the new railway has had on Midlothian and the Borders. Over its first 12 months the new railway's 21,000 train services have carried its first million passengers on a combined 35 million miles. Verified passenger numbers for the first year of operation are not yet available, but they are expected to exceed the forecasts made in the original business case.

Local tourist attractions are also starting to see the benefits of the new line with Abbotsford House, Sir Walter Scott's home, recording a 12% increase in visitor numbers this year. Elsewhere, research by the Moffat Centre has shown that overall visits to Midlothian and Borders tourist attractions increased by 4% and 6.9% over the first seven months of 2016, compared to the same period last year.

Transport Minister Humza Yousaf said: "I am delighted that we are continuing to see the Borders Railway go from strength to strength with over one million passengers using the line during its inaugural year. Not only has the railway linked the

communities in the Borders and Midlothian with the wider Scottish rail network for the first time in 46 years, but the increased accessibility has breathed new life into the region, boosting tourism and employment opportunities. We are now committed to working with ScotRail to strengthen the railway operationally, increasing capacity and delivering a comprehensive programme of refurbishments to rolling stock, which will mean more passengers can travel in greater comfort in the future."

Phil Verster, ScotRail Alliance managing director, added: "The first year of the Borders Railway has been a tremendous success for the communities the line serves – transforming the way people across Midlothian and the Borders travel. The new line has brought the Borders closer to the economic and social opportunities of Edinburgh and given visitors to the capital a new way of reaching one of Scotland's most beautiful and historic regions. We are very proud of the popularity of the new line, are striving to continually improve the service we offer on it, and look forward to welcoming even more passengers aboard Borders' services in the years ahead."

Mark Carne, chief executive of Network Rail, said: "Delivered on-time and to-budget in just two years, the completion of this line was a major engineering challenge. All those who worked on the project can be proud of the part they played in reconnecting communities in the Borders with the wider rail network."

Dominic Booth, managing director of Abellio UK, said: "We are equally as delighted to have been a part of such a landmark

transportation improvement to the Borders, as we recognise just how important Scotland's railway is to the local people, employment, education and tourism, particularly in rural areas. "As with anything new of this scale, we know there is room to strengthen and grow. We are excited about what lies ahead for the Borders line and are proud to be celebrating the first year, with a positive outlook of improvements and developments to come."

The reopening of the Borders Railway re-established services from Edinburgh through Midlothian to Tweedbank for the first time in over four decades.

The project, which was completed on-time and to-budget, included constructing 30 miles of new railway and seven new stations – at Shawfair, Eskbank, Newtongrange, Gorebridge, Stow, Galashiels and Tweedbank

Such is the demand to travel on the line, more seats will be introduced on peak services next year along with plans to introduce longer trains on more services from 2018 – providing significant, longer term increases in capacity.

This is in addition to a significant investment in the rolling stock to deliver enhancements worth over £14 million to the trains over the next two years including fitting power sockets, flooring, lighting, painting, re-livery and wheelchair spaces.

Leeds rail bridge to celebrate city's diversity as part of Upgrade Plan

A railway bridge in Leeds is set to be repainted in rainbow colours as part of repair and strengthening work. Work on the bridge, which crosses Lower Briggate in the city centre, will begin later this month and will be redecorated in a bespoke paint design thanks to funding raised by the local LGB&T Community and Leeds City Council.

The bridge, which carries trains travelling north from Leeds rail station, will also see vital engineering work carried out as part of the ongoing Railway Upgrade Plan to create a more reliable railway for passengers.

Neil Henry, area director for Network Rail, said: "Work at the bridge on Lower Briggate, which carries a huge number of vital passenger services to the north of Leeds, is essential to keep rail services reliable and forms part of our Railway Upgrade Plan. We're delighted that our stakeholders want the bridge to become an iconic one for the city and were more than happy to work with them on the new colour scheme."

Councillor Jonathan Pryor, Leeds City Council's deputy executive member for culture, said: "The plans for this bridge represent a tremendous show of support for the city's LGB&T community. Not only will the rainbow bridge be an eye-catching addition to what is already a lively and eclectic part of Leeds, it will also make a huge statement to our many visitors that here, we embrace and celebrate diversity and the contribution it makes to ensuring Leeds is such a warm, welcoming and successful city."

Thomas Wales, LGB&T campaigner who came up with the idea for painting the bridge, said: "The new rainbow colour scheme is based on a variation of the Freedom Flag as designed by San Francisco artist Gilbert Baker in 1978. Each colour represents something different, from life and harmony to nature and spirit, it is also a scheme that has been adopted internationally to celebrate freedom in sexuality and gender identity in our city. It is destined to become a landmark we can all be proud of."

Class 59 102 heads a stone train through Westbury on September 15th.

Loco Fleet List 2016

This publication gives a reference to all the Diesel & Electric Locomotives which have operated on Britain's railways from the early experimental era right up until the present day.

This information has been put together to give an easy reference to the numbering and official naming of each locomotive and includes all withdrawn, preserved and currently operating locos in TOPS classification order.

Contents

- Diesel Locomotives
- DC Electric & Electro-Diesel Locos
- AC Electric Locomotives
- Eurotunnel Locomotives
- Unclassified & Prototype Locos
- Locomotive Names

Loco Fleet List 2016 is available via mail order for just £7.99 plus £1.99 P&P with a cheque or postal order made payable to: L Miller and sent to: 7 Wood Street, Warrington, WA1 3AY or by using Paypal when visiting the Milz Publications website.

Web: www.milzpublications.co.uk Email: lee@milzpublications.co.uk

Gospel Oak to Barking line closes as work starts to prepare for longer electric trains

From Saturday 24th September, there will be no service between Gospel Oak and Barking (seven days a week) until February 2017 while work takes place to electrify the route ready for new trains that will carry twice as many passengers.

1,700 metres of track is currently being lowered between Blackhorse Road and Walthamstow Queens Road Station as part of major work to electrify the last diesel-operated London Overground route, from Gospel Oak to Barking. Track is being lowered to increase clearance under bridges and make way for new masts that will carry overhead wires to power the new electric trains.

Electricity will be provided by three new power switching stations along the route and one of these is already in place at Gospel Oak. A second near South Tottenham is almost complete and a third will be installed close to Barking station in the coming months. Each switching station links to two power supplies at Acton and West Ham, so if one supply breaks down engineers can switch to the other, minimising disruption for passengers.

Part of the line has been closed since the beginning of June, with trains running from South Tottenham to Gospel Oak only on weekdays, while work takes place. From Saturday 24th September the whole route between Gospel Oak and Barking will be closed, in order for the final phase of work to be carried out. During this period, two areas of track on the western end of the route will be lowered, one between Crouch Hill and Harringay Green Lanes and another between Gospel Oak and Upper Holloway.

From 2018, two-car diesel trains will begin to be replaced by new, four-car electric trains, able to carry twice as many passengers to ease congestion and meet growing demand. Both passengers and railway neighbours will benefit from cleaner air as a result of the switch from diesel to electric trains.

Air-conditioned trains breeze on to Great Northern this autumn

Air-conditioned trains will be breezing onto the Great Northern route for the first time ever during October, as the rail firm gives passengers cooler, more comfortable journeys between the capital and Peterborough and Cambridge.

They are the first of three types of modern train that over the next three years will steadily replace almost all of the trains on the network that are up to 40 years old, creating one of the newest train fleets in the country.

The trains being introduced this autumn feature:

- Greater reliability than existing trains
- Two-by-two seating with tables and power points throughout for those who want to work or play and charge their devices
- Modern passenger information systems
- Spaces for people in wheelchairs, fully accessible toilets and other features for people with disabilities

And from May next year, subject to work to be carried out by Network Rail, these first new trains will also run on the Fen Line, between Cambridge and King's Lynn.

Great Northern Passenger Services Director Keith Jipps said: "We're introducing more reliable, modern air-conditioned trains that will keep passengers as cool as a cucumber and be great for people with disabilities. We think passengers will love the two-by-two seating and the power points at every seat. This is part of an overall plan to replace almost all the trains on the Great Northern route by 2020 – and those few trains that will remain are themselves going through a £30m refurbishment programme. In just a few short years, we'll be moving from one of the oldest fleets in the country to one of the newest."

The new trains are integral to a wide range of proposed service changes and improvements on Great Northern for 2018 that parent company Govia Thameslink Railway announced. This includes new cross-London Thameslink services at stations to and from Stevenage, Cambridge and Peterborough, double the number of semi-fast trains to and from Peterborough and double the number of semi-fast and stopping services off peak to and from Cambridge.

Class 66 110 heads the 6M86 10:30 Margam - Dee Marsh steel along Hencote Bank on September 8th. *Keith Davies*

Richard Schofield, Network Rail's route managing director for Anglia, said: "Passenger numbers are continuing to grow in London and we are electrifying the Gospel Oak to Barking line to support that growth and enable more people to travel on this route, as part of Network Rail's Railway Upgrade Plan. Modernising the railway in this way will enable cleaner and quieter electric trains to run, also benefitting those living or working near the railway. I'd like to thank everyone for their patience while the work is carried out."

Passengers asked to plan ahead for changes at Waterloo during August 2017

Network Rail and South West Trains have launched a campaign asking passengers to plan ahead for major changes taking place at London's Waterloo station between 5-28 August 2017, as they continue to deliver an £800 million upgrade to the station and the railway, and the biggest investment in the London station for 80 years.

Passenger journeys on the lines into Waterloo have more than doubled from 108 million in 1996 to 234 million today. The Waterloo & South West Upgrade will provide more seats, longer trains and a bigger, better Waterloo by:

- Bringing the five platforms of the former international terminal back into use
- Extending platforms 1-4 to accommodate 10-car trains
- Introducing 10-car trains between Waterloo and Reading

The work to extend platforms 1-4 will require platforms 1-9 to be closed between 5-28 August 2017 inclusive. As a result, there will be significant temporary changes to train services across the South West Trains network.

Stuart Kistruck, route managing director at Network Rail said, "Work to deliver our Railway Upgrade Plan at Waterloo is progressing at a fantastic rate and this will continue behind the scenes, but from August 5 – 28 next year we will temporarily shift all of our services along the station so that we can lengthen platforms 1-4.

"During this period we will be closing platforms 1-9, so services will use the other existing platforms as well as platforms 20-24, which will re-open during August's changes. As there will be major impacts on services, we want everyone to have plenty of time to plan ahead while we invest for better journeys down the line."

Christian Roth, Managing Director at South West Trains, added: "The Waterloo and South West Upgrade is the biggest investment in this railway for decades and will provide more trains, more seats and more space for tens of thousands of passengers every day."

"We are doing everything we can to minimise the impact on passengers while the work is carried out but there will be some changes to services next summer, particularly between 5 and 28 August 2017. We are urging passengers, businesses and communities to start planning ahead now while we carry out this work."

Network Rail and South West Trains are today handing out information leaflets and travel card holders to passengers with details of the changes, so that they can plan ahead for the changes next August. The impact of the changes will vary depending on where and when passengers are travelling, and an indication of the impact at each station can be found at networkrail.co.uk/wswupgrade and www.southwesttrains.co.uk/wswupgrade.

£100m railway upgrade means 12 day closure of the line at Bromsgrove

Work will allow line between Bromsgrove and Birmingham to be electrified

Upgraded signalling will help make services to and from the town more reliable

To allow the work to be completed the line will be closed for 12 days

Buses will replace trains serving Bromsgrove station

Trains between Birmingham, Hereford, south Wales and the South West will be subject to an amended timetable

Network Rail, London Midland and CrossCountry are reminding passengers that the railway at Bromsgrove will be closed for 12 days from Wednesday, 26 October as part of a £100m investment. The project at Bromsgrove forms part of Network Rail's Railway Upgrade Plan and has already delivered the new Bromsgrove station. The next phase of the scheme will be to reconfigure the track, points and crossings in the area around the station, and bring into use the new signalling between Five Ways (Birmingham) and Ashchurch in Gloucestershire, in preparation for electrification to Bromsgrove. This will increase the number of trains serving Bromsgrove station from December 2017.

In order to achieve this the line at Bromsgrove will be closed for 12 days between Wednesday, 26 October and Sunday, 6 November. Throughout the closure of the line there will be alterations to services to and from Bromsgrove, Hereford and Birmingham.

Richard Dugdale, senior sponsor for Network Rail said: "This £100m investment at Bromsgrove is key

to modernising the railway through the area and providing passengers with a more reliable, better railway. This is the latest programme of work in the scheme after the successful delivery of the new Bromsgrove station which began welcoming passengers in July.

"There is never a good time to close the railway for any length of time but we have looked at all options and worked with London Midland and CrossCountry to complete this work at a time which will cause least disruption to passengers.

"Our Railway Upgrade Plan is delivering significant investment into the railway network which will provide a better, more reliable railway for passengers."

Steve Fisher, London Midland head of Regional Services, said: "We will do all we can to minimise the inconvenience to our passengers during this upgrade. Electrification will mean we can add lots more trains and lots more services between Bromsgrove and Birmingham. This extra capacity will also benefit passengers travelling to Hereford and Worcester as local rail users switch to the more frequent Bromsgrove services."

Ben Rule, Production Director at CrossCountry, said: "A great deal of effort has been made to deliver a plan that causes the least inconvenience to our customers travelling between the

West Midlands, Wales and the South West. However, we realise this is not always possible and want to thank those customers affected for their patience while these important works take place. When completed, this will deliver extra capacity and more reliable journeys on a very important part of Britain's railways."

Passengers are advised to check before they travel at www.nationalrail.co.uk for the latest information.

Class 59 103 approaches Westbury on September 15th with an empty stone train. *Richard Hargreaves*

The 504s Bury Electric Units.

On Thursday 15th September 2016 members of the Class 504 Preservation Society Committee met the General Manager from the East Lancs Railway to inspect the work the Society has carried out on the Class 504 Bury Unit since last November. Satisfied with condition the unit is now in and with the efforts of the Society, the Class 504 Preservation Society has now been offered a restoration agreement from the ELR in which the Society has to formulate a restoration plan for both power car and trailer car, the Society also has a LMS 50ft Gangwayed Brake van which will also need to be considered within the restoration plan.

This now means the unit has a secure future on the East Lancs Railway as a unique part of the local areas railway history. The Society now has 12 months to complete the restoration of the trailer car to bring it to a satisfactory level that if it could possibly be used at events on the railway in the future. It is hoped that early October the unit will be moved to allow access

to both sides and more work can be carried out the complete the next stage of the restoration. The Society would like to thank all its members for their support since the creation of the Society and hope they will continue to support us in the future. More information can be found at www.class504preservationsociety.co.uk

Photo: M77172 at Buckley Wells during the inspection on September 15th.

Passengers between Preston and Blackpool urged to check before they travel as railway upgrade begins

the 22.19 train service from Preston (Monday – Thursday).

- From Tuesday 4 October a rail replacement service from Blackpool North – Preston will be in place for the 05:21 Blackpool North – London Euston service every Tuesday – Friday until Friday, 9 December 2016.
- The rail replacement service will depart from Blackpool North at 04:57, calling at Poulton-Le-Fylde and Kirkham & Wesham before arriving into Preston at 05:52.
- The 06:00 service from Preston will arrive into London Euston at 08:34 – the same time as the direct Blackpool service is scheduled to arrive.
- The 16:33 London Euston – Blackpool North service will operate as normal.

Sharon Keith, Regional Director for Northern said: “This essential upgrade of the route between Preston and Blackpool is key to help us develop better journeys for our customers. Our advice is to remind customers to check before they travel and we’d like to thank customers in advance for their patience while we work together to improve services.”

Phil Bearpark, Executive Director of Operations & Projects at Virgin Trains on the West Coast, said: “From October 2016, Network Rail is carrying out work to upgrade the railway between Blackpool and Preston. Virgin Trains customers who are travelling from Blackpool to Preston on the early morning service are advised to check for information on the National Rail website when planning their journey. We have worked closely with Network Rail and industry partners to ensure alternative travel arrangements are in place and to keep disruption to a minimum, whilst work takes place.”

Work to electrify the railway between Preston and Blackpool will begin in October. The upgrade, part of Network Rail’s Railway Upgrade Plan, will provide passengers with better, more reliable journeys and is part of a £1bn+ Northern programmed investment to enable electric trains to operate on this line of route. Passengers are being urged to plan their journeys and check before they travel as the work means changes to early morning and late evening services between Preston and Blackpool, from 3 October 2016. These changes will be in place until May 2018.

Alison Rowley, programme manager for Network Rail said: “We are working closely with Northern and Virgin Trains to minimise the disruption to passengers and raise awareness of these changes to morning and evening train services between Preston and Blackpool.

“There is never a good time to affect journeys but we have planned the work to affect the least amount of passengers for the shortest amount of time. This is essential work and I’d like to thank passengers in advance for their understanding.

“The upgrade and wider investment will result in a better and more reliable railway that will serve passengers for many decades to come and help boost the economy across the north of England.”

Over the course of the upgrade until the electrified railway opens in May 2018, over seven miles of railway track will be replaced and improvements to the track layout and signalling equipment be made to increase the reliability of the railway in and out of Blackpool. Blackpool North and Kirkham and Wesham stations will be remodelled meaning that major platform work needs to take place. Simplified track and platform layouts along the route will allow trains to run more efficiently, reducing delays and providing better passenger journeys.

Further closures on the route will be required in 2017, including a series of weekend closures early next year. More details around these closures will be communicated later in the year.

In the mornings bus replacement services will be in operation until the 05.39 train from Blackpool (Tuesday – Friday).

In the evenings bus replacement services will be in operation after the 22.45 train from Blackpool and

Network Rail completes track renewal programme in Yorkshire

A specialist engineering train has completed a four year maintenance programme on the railways serving Yorkshire.

Network Rail's Track Renewal System (TRS) has been working five nights per week in order to minimise passenger disruption with the upgraded track providing passengers with smoother and more reliable journeys.

The TRS has replaced around 250 miles of track across Yorkshire and the routes which serve it, including on the East Coast Main Line. Since the work began in 2012, the distance replaced is equivalent to building a new railway from Kings Cross to Durham and is a key part of Network Rail's Railway Upgrade Plan.

The system has worked all over the region, including Leeds, Hull, York and Sheffield and completed its final

shift on Saturday night, September 18th, on the East Coast Main Line between York and Doncaster.

The £40m high-tech train is over a third of a mile long and typically relays half a mile of track per shift, minimising disruption and delays to passengers as it reduces the need for weekend closures.

Ben Brooks, TRS project director from Network Rail, said: "The Track Renewal System has worked across Yorkshire for the past four years. We hope railway users will feel the full benefit of the programme, as many may have been unaware that this work was being carried out."

Freightliner supports Department for Transport's Rail Freight Strategy

Freightliner welcomes the recent publication of the Rail Freight Strategy by the Department for Transport. Recognising the positive benefits that rail freight delivers for the UK economy and its role in helping to reduce carbon emissions, and it is delighted that this important publication has been issued.

"The Strategy emphasises the importance of having a clear policy framework to support rail freight to achieve its potential," said Russell Mears, Freightliner European CEO and Chair of the Rail Delivery Group's (RDG) Freight Group.

"It sets out a clear vision for how rail freight can continue to grow and identifies opportunities for industry partners to collaborate and innovate

in order to help deliver increased environmental and air quality benefits, relieve the pressure on our road network and increase the productivity of British businesses."

"We recognise that it will be for the industry, including the rail freight operators, to deliver the vision and we welcome the sense of direction that this Strategy provides in helping the industry plan ahead."

New drainage system makes Settle-Carlisle line safer and more reliable for years to come

Network Rail has installed a new drainage system on the Settle to Carlisle railway line in rural Cumbria which will ensure that the line is safer and more reliable for passengers for years to come.

The section of railway line, near to Cumbria's border with North Yorkshire has seen the foundation of the railway line deteriorate due to rainwater collecting near to the track. The new system will enable surface water to drain away into a nearby stream and away from the line.

The main elements to the work saw drainage installed to collect surface and ground water, allowing it to flow directly into the nearby Cow Ghyll Beck, a stream close to the line.

The second part of the project was to repair the embankment that approaches the tunnel, north of Dent station. This included installing a weir designed to slow the stream at the base of the earthwork during storms and heavy rainfall. In addition to this a second wall was built to support the repaired slope above.

Rhiannon Price, project manager for Network Rail said: "The work that the team has carried out at Dent will make sure that train services will be able to run safely and more reliably on a remote and iconic section of railway for years to come.

"There were a number of challenges that the team faced in completing this, not least the environment where the site was located. The roads were narrow and winding with some very steep gradients. However the staff overcame these physical obstacles and as you can see from the pictures the end result is quite impressive."

Councillor Keith Little, cabinet member for highways and transport at Cumbria County Council, said: "I am delighted that this important work has been carried out on the Carlisle – Settle line. The work will greatly enhance the resilience of the railway to future flooding events, and minimise disruption to rail services during inclement weather. This has been a complex task due to the isolated location of the site, and the council would like to thank our partners at Network Rail for their commitment and hard work in completing these repair works."

Mark Rand, from the Friends of the Settle-Carlisle Line, said: "This is another example of the sort of work being done by Network Rail to keep this iconic railway running safely for decades to come. From the threat of closure in the 1980s is emerging a very robust line indeed, very much part of the Britain's strategic rail network."

The work will ensure that the section of track on the Settle-Carlisle railway line will be more stable and allow passengers to travel safely along one of England's most picturesque sections of railway.

Did you Know - Ken Mumford

Gluepot Bank Just to the east of Llandow Wick Road Halt (built on the Barry to Bridgend line for a nearby Llandow RAF camp) was a long rising gradient of 1 in 141 nicknamed *Gluepot Bank* after a number of engines that stuck on it. Crossing this bank were three bridges and in Barry Railway days they also had nicknames - 'She Could', 'She Should', and 'She Will.' In later days these nicknames had been changed to: 'Faith', 'Hope' and 'Charity.'

Stuck on Gluepot Bank!

Originally Barry Railway No. 48 built by Sharp, Stewart in 1890 and sold out of service to Bargoed Colliery where, as GWR 711, it was fitted with NCB 'home made' pannier tanks. Did this loco get stuck on 'Gluepot Bank'?

Come and meet Ken

Ken Mumford will be at these future presentations:

RAILWAY ALLSORTS 2 at the Hereford branch of the WORCESTER LOCOMOTIVE SOCIETY in November - This is varied because of its allsorts nature - usually arranged to involve folk's participation, so it's difficult to set out a particular 'menu!'

THE ELAN VALLEY RAILWAY at Reading where Ken will be using the title - 7 DAMS and a RAILWAY - I've enjoyed researching this mainly using the book on this by Oakwood Press (with permission from one of its directors) and as book and leaflets from the Elan Valley Visitors Centre, with photos I've taken during my visits to that area.

SIBERIAN YORKSHIRE at Bromsgrove in November - Three days in February 2012 as a guest of the Bahamas Locomotive Society who were running their (then) recently overhauled Coal Tank No. 1054. Why 'Siberian?' It was VERY CCCOOOULLLDDDD!!!

The A1 Steam Locomotive Trust
New Steam for the Main Line

FAMOUS NEW STEAM LOCOMOTIVE TORNADO AFFILIATED WITH RAF MARHAM AS PART OF CENTENARY CELEBRATIONS

The A1 Steam Locomotive Trust, the registered charity behind new steam locomotive No. 60163 Tornado, and the Royal Air Force are delighted to announce the affiliation of the locomotive with RAF Marham as part of the station's centenary celebrations. To mark the affiliation, Tornado now carries the RAF Marham crest on the fireman's side nameplate. RAF

Mark Allatt, chairman, The A1 Steam Locomotive Trust, added: "It's a great privilege for No. 60163 Tornado to be affiliated with RAF Marham as it celebrates its 100th birthday. The locomotive was named in honour of the RAF aircrews who fought in the first Gulf War and in many other subsequent conflicts. We are delighted to be re-invigorating our relationship with the RAF

name which were on active service in the middle east during the first Gulf War when the project to build the new Peppercorn class A1 Pacific was in its infancy. The nameplates were originally presented to The A1 Steam Locomotive Trust in a ceremony at Birmingham Railway Museum in 1995 and bore the crests of the then RAF Cottesmore and its Tri-National Tornado Training Establishment (TTTE) which trained British, German and Italian aircrews to operate the aircraft. With The Trust's establishment of its permanent base at Darlington Locomotive Works in 1997 and the dissolution of the TTTE in 1999, the crest on the latter plate was replaced by that of nearby RAF Leeming (then an RAF Tornado station). This was the nameplate unveiled by TRH The Prince of Wales and The Duchess of Cornwall when Tornado was formally named at York station on 19th February 2009. Coincidentally, HRH The Duchess of Cornwall is the Honorary Air Commodore of RAF Leeming.

The Trust respectfully requests that anyone wanting to see Tornado follows the rules of the railway and only goes where permitted.

Marham is the home of the RAF's Tornado GR4 two-seat, all-weather, day/night attack and reconnaissance aircraft. On Friday 26th August the Nene Valley Railway (NVR) at Wansford, Cambridgeshire, hosted the rededication of No. 60163 Tornado and its affiliation with RAF Marham as part of the station's 100th birthday celebrations.

Following a briefing on the building and operation of the locomotive by Trust chairman Mark Allatt, representatives of the station's military and civilian staff witnessed the unveiling of Tornado's nameplate bearing the RAF Marham crest by Station Commander Group Captain Rich Davies ADC MA RAF and Trust President David Champion. This was followed by a blessing by station Padre Reverend Geoffrey Firth.

Group Captain Rich Davies commented: "We are delighted to affiliate RAF Marham in our centenary year with the magnificent achievement that No. 60163 Tornado represents. It's sheer power and presence is reflective of that of the Tornado aircraft that operate from RAF Marham and have been the backbone of the RAF for the past 30 years."

and look forward to future collaborations."

Following the dedication ceremony those present were given the opportunity to drive Tornado under supervision and later that evening the station hosted a 'dining in' night on the railway's dining train also hauled by Tornado. It is hoped that No. 60163 Tornado will play a role in the Royal Air Force's centenary celebrations in 2018.

No. 60163 Tornado was named after the RAF Tornado aircraft of the same

THE COUNTRY'S LARGEST OPERATIONAL STEAM LOCOMOTIVE VISITS CORFE CASTLE AND SWANAGE TO MAKE HISTORY

Named after Her Majesty the Queen when she was a child, the country's largest operational steam locomotive has hauled a special main line excursion train from London down to Corfe Castle and Swanage.

Built by the London Midland and Scottish Railway Company at Crewe during 1933 for hauling prestigious express trains, the iconic 160-ton No. 6201 'Princess Elizabeth' made history by being the largest steam locomotive to visit the Swanage Railway.

The powerful steam locomotive still holds a world record speed record for a steam locomotive that was set in 1936 when it ran at more than 70 mph on the west coast main line between London and Glasgow.

Crowds gathered at Corfe Castle and Swanage to watch the arrival of the 621-tonne ten-carriage train organised by Steam Dreams with the locomotive sporting a Cathedrals Express headboard on its smokebox door.

A majestic leviathan of steam owned and operated by the Princess Elizabeth Locomotive Society, 'Princess Elizabeth' departed London's Victoria station just before 9am for the five-hour journey to the Isle of Purbeck.

After its passengers spent more than three hours enjoying the delights of Swanage and Corfe Castle, the long train departed Swanage for London's Waterloo station at 5.20pm – reaching the Capital just after 10pm.

Swanage Railway Company chairman Trevor Parsons said: "It was a great honour, and very exciting, to play host to such a prestigious, powerful and record-breaking steam locomotive that was the largest to visit Corfe Castle and Swanage.

"A member of the Princess Royal class of steam locomotives, No. 6201 is a magnificent and majestic piece of engineering – it was absolutely wonderful to see it in steam and doing what it was designed to do more than 80 years ago.

"Named after the Queen when she was the seven year old Princess Elizabeth of York, 'Princess Elizabeth' sounded its whistle on the Battersea railway bridge over the River Thames in London to signal the start of the Queen's Thames diamond jubilee pageant in the summer of 2012.

"Then, a few weeks later in 2012, the Queen travelled in the Royal Train behind 'Princess Elizabeth' from Newport to Hereford and then from Worcester to Swindon and Oxford as part

of the Diamond Jubilee Tour," added Mr Parsons, a volunteer Swanage Railway train guard and signalman.

Swanage Railway volunteer Geoff Truscott, from Puncknowle in west Dorset, had the honour of signalling 'Princess Elizabeth' and its long Cathedrals Express excursion train into Swanage station.

Geoff explained: "With its classic lines and iconic maroon livery of the London Midland and Scottish Railway Company of the 1930s, 'Princess Elizabeth' looked and sounded marvellous – a truly majestic symphony of steam.

"I knew the railway to Corfe Castle and Swanage in its dying days back in the late 1960s and was saddened to witness the line's closure and demolition. I never dreamt that, 44 years later, I would signal the country's largest operational steam locomotive into Swanage. It was a real honour," he added.

After a working life of almost 30 years hauling long and heavy main line express trains from London to the north, British Railways withdrew 'Princess Elizabeth' from traffic in 1962 – the year of the Cuban missile crisis – when the locomotive was saved from the scrapyard and purchased for preservation.

The summer of 2016 saw No. 6201 'Princess Elizabeth' return to hauling main line excursion trains around the country after an engineering overhaul that took more than three years.

The Swanage Railway welcomes new volunteers – for an informal chat, contact Swanage Railway volunteer co-ordinator Mike Whitwam on 01929 475212 or email 'iwanttovolunteer@swanagerailway.co.uk'.
