Submissions & Contributions

Railtalk Magazine, a magazine written by the Enthusiast for the Enthusiast. So why not join the team. We are always looking for talented photographers and writers to join us at Railtalk. Be it though pictorial submissions or via a written article featuring an event or railtour, we greatly appreciate any contributions to the magazine however big or small.

Photographic Contributions

All Photographic contributions should to be sent to us via email, post or via the members section page on our website. Contact addresses are provided above.

All images should be provided at a resolution of at least 2400px x 1700px at 240dpi.

Welcome to Issue 242

In the news this month, firstly is the news that the ORR has rejected new West Coast services over capacity constraints and risk of worsening delays for passengers.....

Proposals for new train services between London and Wrexham, Rochdale and Blackpool have been rejected by the Office of Rail and Road (ORR) after its assessment found adding more trains to the West Coast Main Line would likely increase delays and cancelled trains for passengers. The rail regulator rejected applications from the Wrexham, Shropshire & Midlands Railway Company (WSMR) for four return Wrexham-London Euston services and Lumo's up to four return Rochdale-Euston services. It also rejected Avanti West Coast's application for additional Blackpool-Euston services. ORR's assessment following detailed and extensive analysis is that the capacity and performance of the southern section of the West Coast Main Line has not materially changed since similar applications were rejected in 2025. An external review commissioned by ORR also supported this conclusion.

Gaps in the current timetable need to provide important space for trains to recover when disruption occurs, minimising delays to passengers. ORR concluded that adding more services into these windows in the timetable for recovery would reduce that resilience, increasing the risk of disruption spreading to other services and affecting more passengers. ORR has however approved access for Avanti's weekday 19:29 Chester to Euston service to carry passengers until December 2030. This train already runs as a fully crewed empty service and will continue to do so, so the decision does not add another train to the route but will instead add benefit for passengers.

Stephanie Tobyn, ORR's director of strategy, policy and reform, said: "New services, destinations and greater choice can bring real benefits for passengers and communities. But the West Coast Main Line is already under significant pressure, with performance reflecting limited resilience on a heavily used part of the rail network. Our detailed analysis has shown that adding more trains to the current timetable would reduce the ability to recover when disruption occurs, increasing the risk of delays spreading and making reliability of the network worse for all passengers."

Then there is the announcement that the ORR is seeking views on new safeguards for fair rail ticket market under Great British Railways.

The Office of Rail and Road (ORR) has launched a consultation on a draft Retail Code of Practice that would establish new safeguards for the future online rail ticket market under Great British Railways (GBR). The draft Code is intended to help ensure the market remains fair and open, supporting competition and passenger choice as GBR takes on a major role in rail retail.

GBR will operate most passenger rail services, set the customer offer for those services, and sell tickets across digital channels, at stations and on board its trains. In the online ticket retail market, GBR will also manage the retail functions that other ticket retailers rely on to participate in the market, such as central industry IT systems, data processing and the issuing of third-party retailer licences.

ORR's proposed Retail Code of Practice would require GBR to give all non-GBR online retailers fair, transparent, and non-discriminatory access to fares, products, systems and related services, without giving its own online ticket retail business an undue advantage. The regulator's proposed Retail Code of Practice also sets expectations for managing conflicts of interest, protecting commercially sensitive information and making market-wide decisions fairly and transparently. GBR will be required to comply with the Retail Code via its licence, allowing ORR to monitor compliance and, where necessary, consider formal enforcement action. GBR will also be subject to competition law and need to act in a way which does not exclude competitors, distort the online retail market or abuse its position.

Stephanie Tobyn, ORR's Director of Strategy, Policy and Reform, said: "GBR will have an important role in shaping the future retail market, while also selling tickets itself. Our proposed Retail Code of Practice will provide enforceable safeguards to help maintain a fair and open online retail market, supporting passenger choice.

"We've already engaged with representative organisations and key stakeholders, and now we want to hear from everyone with an interest in the future online rail retail market. Their views will help us ensure the Retail Code of Practice is effective in supporting a fair and open market."

The ORR is encouraging independent retailers, rail operators, passenger and consumer groups and other interested organisations to respond to the consultation.

Once again, thanks for all the photos sent in this month, we really appreciate the time taken to send them to us. Until next month, stay safe. **Andy**

Avanti West Coast awarded for keeping customers moving by rail using historic route

Avanti West Coast has been honoured for running trains on the historic Settle to Carlisle railway to keep customers moving during major engineering works.

The intercity operator won the 'Delivering for the customer' category at the regional Spotlight Rail Awards North for continuing to deliver journeys by rail whilst the West Coast Main Line was blocked.

Renowned for its beautiful scenery, the route was used when Network Rail carried out essential railway improvement work on the main line over 14 days in January, a two-day closure over the Easter weekend, and a further nine-day programme at the end of April.

On these days, Avanti West Coast ran a shuttle service, using their bi-mode Class 805 Evero trains, roughly every two hours non-stop via the Settle to Carlisle route. These trains are able to run on electric or diesel power, therefore with no overhead power wires on the diversionary line, the operator was able to utilise the diesel capability of its new fleet to keep customers moving by rail.

The decision to run these trains was supported by Transport Focus research from 2015, which says passengers strongly prefer to remain on trains, even with diversions.

January was the first time in over a decade that in-service intercity trains had run on the Settle to Carlisle line.

Avanti West Coast collaborated with Network Rail and other operators to deliver this customer-focused approach. The work in the lead up included testing the Evero fleet on the line, carrying out intensive staff training, and creating transport interchange points at new locations such as Lockerbie.

Together with industry partners, Avanti West Coast was able to deliver value for money by reducing the reliance on bus replacement services and maximising existing rail infrastructure to provide a more efficient and seamless transport offer for customers, while maintaining vital links between Scotland, the North West and beyond.

Chris Liptrot, Operations Director at Avanti West Coast said: "A lot of hard work and innovative thinking went into making these Settle to Carlisle diversions a reality, and I am delighted for the team to receive this award and the recognition they deserve.

"Though close working with industry partners, we have created a successful benchmark to continue delivering customer journeys by rail during extensive engineering work on the northern parts of the West Coast Main Line."

Avanti West Coast reveals what really makes us comfortable on trains

New research from Avanti West Coast has revealed the unwritten rules of onboard comfort from how far people will go for more space, to behaviours that generate a tut of disapproval. The intercity operator has launched its first Comfort Index, combining consumer research with booking and onboard data to provide a unique insight into what passengers value most during their journey and how definitions of comfort vary across Britain.

Brits have a clear idea of the perfect set-up. Results showed that 77 percent want a window seat, 69 percent prefer to face forward, and 58 percent want an empty seat beside them. So much so that one in five would travel 15 minutes longer to keep it empty, 18 percent would pay an extra £5, 22 percent would sacrifice Wi-Fi and one in five would even swap their coveted window seat for a little more space.

Avanti's booking data suggests there may be such a thing as the perfect train seat. It revealed Seat 18 in Coach B is the most reserved seat on its Pendolino services, booked 179,685 times over the last year. It matches passenger preferences of having a window and table, which was uncovered by the research. While those travelling on the West Coast Main Line have similar thoughts about seats, snacks prove controversial with 52 percent of rail travellers objecting to boiled eggs and 48 percent to tuna sandwiches onboard. The famously reserved reputation of British people extends to the carriage environment too. More than two-thirds want more quiet carriages, while over half would choose a completely phone-free carriage, suggesting that for many, the dream journey might simply be one where nobody makes any noise.

The Index also reveals a generational shift in the unwritten rules of rail travel. Gen Z passengers are more tolerant of video calls, with just 38 percent of 18-24-year-olds saying Facetiming onboard is unacceptable compared with almost three quarters of over-65s.

Sounds of other people's phones onboard reveals an even bigger generation gap. Nearly 90 percent of over-65s object to TikToks or videos without headphones compared to 51 percent of 18-24-year-olds. Younger passengers also place greater emphasis on choice and making the journey their own, with 62 percent of 25-34-year-olds saying the choice between Standard, Premium and First Class matters when planning a journey, compared with 42 percent of over-65s. And Gen Z are bringing their own comforts onboard too – one in eight of 18-24-year-olds would even pack a massage gun!

There is one thing everyone seems to agree on – keep your socks on! Three quarters say taking them off onboard is unacceptable, while 70 percent object to TikToks without headphones and 67 percent to someone cutting or filing their nails. Rail journeys are considered part of the occasion, with 69 percent of Brits saying their leisure time starts the moment they get onboard. Over the last year, Avanti West Coast's customers drank almost 420,000 cups of breakfast tea, alongside 212,000 KitKats that were enjoyed by those taking a break on their commute. Beer proved another favourite, with 154,000 Grolsch Pilsners sold, painting a suitably British picture of onboard comfort – a cuppa, something sweet or a cold beer enroute.

From seating preferences and how much noise will be tolerated to whether a boiled egg has any place on a train, the Index show Brits might never agree on exactly what makes the perfect journey.

Kathryn O'Brien, Customer Experience Director at Avanti West Coast, said: "The Comfort Index shows everyone's definition of comfort varies. While there is some unspoken rail travel etiquette most seem to agree on, beyond that people have different thoughts on what makes a comfortable journey. For some it's peace and quiet while for others it's getting work done, enjoying a snack or having space to relax. Customers most value the ability to shape their journey around their own needs, whether that's choosing the perfect seat or enjoying a cup of tea onboard. That's why we offer our Seat Picker tool and a range of refreshments in our onboard shop, helping customers to enjoy their trip from the moment they board. By better understanding what matters most to our customers, we can continue to enhance and develop the onboard experience, including upgrading Wi-Fi connectivity, to make travelling with Avanti West Coast as comfortable as possible for everyone."

UK-first smart gates unveiled by Chiltern Railways at High Wycombe Station

Innovative new smart gates designed to both tackle fare evasion and improve accessibility were unveiled by Chiltern Railways at High Wycombe Station on October 9th. Designed by Cubic Transportation Systems, the modern FEnX gates at High Wycombe are the first of the next generation of gates to open to the public in the UK. Compared to older style ticket gates, the new technology can understand how customers are moving through the gate and their mobility needs. This helps customers move through stations more quickly and easily, with improved accessibility and a smoother travel experience.

Fare evasion costs the railway millions each year, preventing investment into the network, driving up prices for the vast majority of customers who pay for their travel, and undermining trust in the system. The new gates have been installed at both entrances to the station serving platforms 1, 2 and 3. They were officially unveiled at a launch event attended by Chiltern Railways, Cubic, Wycombe MP and Chief Secretary to the Treasury Emma Reynolds and industry partners. Guests were able to test the new gates which are now in use at the station.

Tony Baxter, Interim Managing Director of Chiltern Railways, said: “I am delighted that High Wycombe is the first station in the UK to have these new ticket gates in operation. Their size and innovative features will not only protect crucial funds lost to fare evasion, but they will improve the experience for customers travelling through the station. It is only a few weeks since Chiltern moved into public ownership and this announcement is a great example of industry collaboration to deliver a better railway for our customers in the future.”

Emma Reynolds, MP for Wycombe and Chief Secretary to the Treasury, said: “As a regular commuter on Chiltern Railways, I welcome measures to crack down on fare evasion and anti-social behaviour. I am delighted that High Wycombe has been selected as the first station in the country to get the state-of-the-art FEnX gates. It is good news that the gates will also improve the customer experience for passengers with disabilities.”

Kevin Maslin, Managing Director for Europe, the Middle East and Africa at Cubic, said: “This is a great moment for both Chiltern Railways and Cubic. We have built a strong partnership over many years, and we have consistently been at the forefront of innovation together. Bringing FEnX gates to High Wycombe is another example of that shared ambition, creating a more accessible and modern railway network. We look forward to installing FEnX gates at many more stations across the UK.”

Key benefits of the gates include:

Reducing fare evasion both through a stronger physical barrier and a detection system which monitors when people try to enter without paying
Improved accessibility for people with disabilities as the sensors can recognise when someone needs more time, keeping the gate open longer when appropriate
Creating a safer station environment by using advanced sensors and computer vision
Pay as you go technology for customers using contactless is still at a testing phase and will be available for use on the new gates in the coming weeks. Customers who currently travel using pay you go with contactless will be able to use the card validators next to the gates in the interim.

Maritime liveried Class 66 727 ‘Maritime One’ is seen at Winwick with a Clitheroe to Avonmouth cement train on November 2nd. *Brian Dobbs*

GB RAILFREIGHT SIGNS LONG-TERM AGREEMENT WITH 7 STEEL UK

GB Railfreight (GBRf), the UK’s largest rail freight operator, has signed a new long-term agreement with 7 Steel UK that will see the company transport steel products to and from the manufacturer’s Cardiff operations for at least the next 11 years.

The agreement will see GBRf move scrap steel into 7 Steel UK’s Cardiff facilities and transport finished steel products to customers across the UK. It also extends the company’s existing on-site shunting activities, creating an integrated logistics solution that places rail at the heart of the steelmaker’s supply chain. Services are scheduled to commence in October 2026, with GBRf providing a combination of rail haulage and site operations to support the movement of materials and finished products.

GBRf has worked closely with 7 Steel UK for more than 15 years through its existing contract and this significantly expanded agreement further strengthens this relationship. It also broadens GBRf’s position within the steel sector which provides a platform for future growth whilst supporting the continued movement of freight by rail, helping improve safety and reduce congestion on the UK’s roads and lowering carbon emissions.

As part of its long-term commitment to the contract, GBRf will introduce two new sets of purpose-built scrap wagons during 2027, supporting operational efficiency and modernising the fleet serving the Cardiff operation. An additional set of specially modified wagons will also be provided that will be able to 7 Steel UK’s outbound finished goods of rebar and coiled steel.

Alex Kirk, Commercial Director at GB Railfreight, said: “This agreement is a significant milestone for GB Railfreight and we’re proud to be expanding our relationship with 7 Steel UK and supporting both the inbound movement of raw materials and the distribution of finished products across the country.

“The contract provides a strong foundation for future growth and demonstrates the important role rail freight continues to play in supporting UK industry. We’re looking forward to working closely with 7 Steel UK for many years to come and delivering the safe, reliable and efficient service our customer expects.”

Vorn O’Hennessy, Head of Supply Chain Management at 7 Steel UK, said: “This agreement strengthens our supply chain, supports more sustainable logistics and reflects our long-term commitment to steelmaking in Cardiff. We look forward to continuing our partnership with GB Railfreight to deliver reliable, efficient service for our customers across the UK”

Great Western Railway

A Class 802 Hitachi 5 car set departs Morton in Marsh on September 24th with a service to London Paddington. *Charlie Robbins*

Heathrow Express liveried Class 387 131 passes Hanwell on an empty stock working heading for Reading depot on October 20th. *John Sloane*

Class 800 036 approaches Hanwell with a service from London Paddington to Cheltenham on October 20th. *John Sloane*

Teamwork At Heart Of National Award Success For Newark Northgate Station

Great teamwork is key according to LNER colleagues at Newark Northgate Railway Station, after they clinched the prestigious ‘Medium Station of the Year’ title at this year’s National Rail Awards.

Newark Northgate beat off stiff competition from stations including Dundee, Rochester and Biggleswade. The award celebrates the dedication of colleagues across every area of the station who work together each day to support customers and maintain high standards. The accolade comes as the station prepares to mark its 175th anniversary in 2027.

Newark Northgate serves thousands of customers each day and now benefits from quicker journeys and more weekday trains to and from London King’s Cross.

Tom Sach, Station Delivery Manager, said: “I’m immensely proud of the team. Everyone cares deeply about the station and our customers. For almost 175 years, the station has served the local community, and our colleagues take great pride in everything they do. From our Travel Centre team and station assistants to our dispatchers, cleaning team and management colleagues, everyone plays a vital role.”

Jay Paterson, who was there on the night to pick up the award, said: “Representing Newark Northgate at the National Rail Awards was a real privilege, and it was fantastic to meet so many colleagues from across the industry. Winning the award has been really special for us, recognising our commitment to our customers at the station every day.”

Lydia Hutton, who works at Newark Northgate Station for cleaning contractor OCS, said: “We all want our customers to have a positive experience when they travel through the station. We are one team which works together so well, so the recognition that comes with this award means a great deal to us all.”

Tea Before Tee: LNER Opens New First Class Lounge at Leuchars Station

A new First Class Lounge is now open for LNER customers travelling to and from Leuchars station in Fife.

Around 175,000 customers travel each year on 52 LNER services per week to or from Leuchars, with many of those using the station as the main hub to access the world-famous St. Andrews golf course nearby.

The new lounge provides First Class customers with a comfortable, warm place to relax ahead of their LNER train journey, as well as being stocked with complimentary refreshments, and featuring specially commissioned artwork based on the local area.

It was officially opened on October 8th, in a special ceremony, by renowned chef, Dean Banks, who has several high-quality restaurants locally and across Scotland. Guests from across the rail industry and the local area joined senior LNER colleagues to experience the new lounge.

Graeme McKinnie, Regional Station Manager for LNER in Scotland, said: “We are thrilled to have opened our new First Class Lounge in Leuchars, which is a very popular and important destination for us and our customers. Leuchars is the second busiest station north of Edinburgh for LNER.

“We have worked closely with local partners to open this new lounge and deliver the benefits that it brings for both leisure and business travellers. Our hope is that the space will further enhance our customers’ experiences while travelling by train, providing a warm, welcoming area to relax ahead of their journey.”

The opening of the First Class Lounge will provide the station with a regular LNER colleague presence, allowing customers to seek support or ask questions, if required, in advance of their journey.

Lumo

Class 222 605 races past Standish on October 16th with a Stirling to London Euston service. *John Sloane*

Class 222 604 working the 1M01 Stirling - London Euston service speeds through Stafford on October 6th. *Richard Hargreaves*

Network Rail

On October 27th, with beautiful autumn colours lining its route, the 21:11 Coleham - Coleham via nearly everywhere on the English/ Welsh border, and by now running 85 late, is led by Class 56 113 and tailed by 56 096 as they approach Flint (or should that be 'Y Fflint?).
Jeff Nicholls

Keith Davies

Units: DMUs and EMUs

Northern's Class 156 411 is seen at Ribblehead on October 3rd the final stop for the once a week train from Rochdale, via the Clitheroe to Hellifield line. *Bryan Roberts*

West Mid's Class 196 113 working the 1G21 Shrewsbury - Birmingham service is seen at Wellington on October 24th. *Richard Hargreaves*

Southern's Class 377 701 with the 2O37 Watford Jct. - East Croydon service is seen at Watford Jct. on October 20th. *Richard Hargreaves*

Units: DMUs and EMUs

The Class 159/1 units are in the process of going through a refurbishment and repainting programme. Until the programme started earlier this year, the entire sub class was still in the old South West Trains livery. The three units dealt with so far have all emerged in South Western Railway livery, not Great British Railways livery as might have been expected. This is Class 159 107, the third class 159 unit to be refurbished at Bournemouth Depot and it was returned to Salisbury on October 26th. The freshly painted unit emerged in South Western Railway livery and is seen departing Southampton after reversing there with 13:48 Bournemouth Depot - Southampton (reverse) - Salisbury Depot.
John Goodrich

Units: DMUs and EMUs

Northern's BEE liveried Class 323 239 departs Crewe on October 7th with a service to Manchester Piccadilly. *Russell Clarke*

Elizabeth line's Class 345 073 working 5H71 Crewe - Wembley test run passes Stafford on October 12th. *Richard Hargreaves*

Northern's Class 158 844 departs Carlisle with a service to Newcastle on October 3rd. *Bryan Roberts*

Units: DMUs and EMUs

Southern's Class 387 125 passes St. Denys on October 13th with the 13:13 Brighton - Southampton service. *John Goodrich*

London Overground's Class 710 268 with the 2D85 London Euston - Watford Jct. service arrives into its destination on a wet October 20th. *Richard Hargreaves*

West Mid's Class 196 107 passes Upton Magna on October 20th with 10:05 Shrewsbury - Birmingham New Street service. *Phil Martin*

On October 13th, South Western Railway's Class 701 049 arrives at Clapham Junction with the 10:49 Reading to London Waterloo service. *Barry Longson*

London Overground's Class 710 271 working the 2C40 Watford Jct. - London Euston service departs Watford Jct. on October 20th. *Richard Hargreaves*

Units: DMUs and EMUs

South Western Railway's 5 car Class 701 504 is seen moving back into the stabling yard (from whence it came) at Clapham Junction, at a slow steady speed on October 13th.
Barry Longson

Elizabeth line's Class 345 071 working the 9U37 Reading - Abbots Wood service departs Reading on October 29th. *Richard Hargreaves*

SWR's Class 158 883 and 159 005 break the dominance of EMUs at Clapham Junction, as they pass with the 10:00 Exeter to London Waterloo service on October 13th.
Barry Longson

Units: DMUs and EMUs

Standing in the bay at Crewe, West Midlands' Class 730 045 waits to head back south on October 15th. *Russell Clarke*

Northern's Class 331 101 is seen stabled in platform 4 at Crewe on the evening of October 7th. *Barry Longson*

Northern's Class 195 126 with 'Peak District 75' livery is seen at Deansgate on October 21st with a service to Manchester Airport. *Harold Hull*

Units: DMUs and EMUs

Thameslink's Class 700 042 passes Alexandra Palace with 2C25, the 10:22 Cambridge to London King's Cross on October 27th. *Derek Elston*

SWR's Class 701 009 working the 2C44 Reading - London Waterloo service is seen ready to depart Reading on October 29th. *Richard Hargreaves*

Northern's Class 323 203 departs Stockport some 56 minutes late while working the 08:55 Stoke on Trent to Manchester Piccadilly service on October 8th. *Barry Longson*

Units: DMUs and EMUs

London Overground's Class 378 215 passes Willesden Junction Low Level during an empty stock move on October 19th. *John Sloane*

Southern's Class 377 701 heads away from South Kenton towards Watford on October 19th. *John Sloane*

Northern's Class 333 003 sits in the north bay at Doncaster having arrived on a service from Leeds on October 20th. *Michael Lynam*

Units: DMUs and EMUs

Thameslink's Class 700 109 arrives at Farringdon with a Bedford to Brighton service on October 20th. *John Sloane*

West Midlands Railway's Class 730 047 heads away from South Kenton with a service to Tring on October 19th. *John Sloane*

West Midlands Railway's Class 730 005 heads a service from Milton Keynes to London Euston past South Kenton on October 19th. *John Sloane*

Units: DMUs and EMUs

Northern's Class 195 103 approaches Pleasington with a York to Blackpool service on October 29th. *John Sloane*

An Elizabeth Line service to Abbey Wood worked by Class 345 062 makes a call at Hanwell on October 20th. *John Sloane*

Southern's Class 377 701 calls at Kensington Olympia with a Watford to East Croydon service on October 20th. *John Sloane*

Units: DMUs and EMUs

Working it's first day of mileage accumulation runs Elizabeth line's Class 345 073 passes Wolverton as 5H71, the 11:15 Stafford to Wembley InterCity Depot on October 8th. *Derek Elston*

Still carrying the livery of its former TOC, SWR's Class 158 883 departs Clapham Junction on October 13th with sisters 159 005 and 159 018 operating the 10:00 service from Exeter to London Waterloo. *Lee Stanford*

West Midlands Trains Class 172 339 looks spick and span after a refresh at Ilford, passing Northampton as 5Q90, the 10:47 Ilford E.M.U.D. to Tyseley L.M.D. on October 4th. *Derek Elston*

Units: DMUs and EMUs

London Northwestern's Class 730 229 and 730 219 working 1U22, the 08:13 Crewe to London Euston are passed by 805 011 working 1F15, the 09:05 London Euston to Liverpool Lime Street at Banbury Lane on October 15th. *Derek Elston*

A nocturnal view of Bee Line liveried Class 323 239 as it departs from Heaton Chapel on the evening of October 30th operating the 17:30 Crewe to Manchester Piccadilly. *Lee Stanford*

London Northwestern's Class 730 219 arrives into Bletchley with 2K24, the 12:30 Milton Keynes Central to London Euston service on October 8th. *Derek Elston*

Units: DMUs and EMUs

In revised livery, London Overground's Class 378 209 departs Clapham Junction with the 12:00 service to Dalston Junction on a bright October 13th. *Barry Longson*

South Western Railway's Class 701 024 slows for its booked stop at Clapham Junction working the 13:03 London Waterloo to Windsor and Eton on October 13th. *Barry Longson*

LNW's Class 350 372 departs Crewe working a service to Liverpool Lime Street on October 23rd. *Michael Lynam*

Units: DMUs and EMUs

Following the return of Class 159 107 to Salisbury after overhaul, 159 106 was sent to Bournemouth. On October 28th the unit is seen passing Millbrook 11:45 Salisbury - Southampton (reverse) - Bournemouth Depot stock move to become the fourth unit in the Class 159 refurbishment programme.
John Goodrich

London Overground's Class 710 114 is seen arriving into Romford with the Liberty Line shuttle service, 2V41, the 15:55 from Upminster and will form the 16:11 departure.
Derek Elston

Great Northern's Class 717 003 is seen arriving at Alexandra Palace with 2F27, the 11:02 Stevenage to Moorgate service on October 27th. *Derek Elston*

Units: DMUs and EMUs

Despite being refurbished only recently, many of the South West Railway's Class 458 units are now in store. However on October 13th, Class 458 412 and sister 458 402 were still operating and are seen departing Clapham Junction with a Reading to London Waterloo service.
Lee Stanford

Northern's Class 158 845 approaches Long Preston on October 8th working a Morecambe - Leeds service. *Michael Lynam*

LNWR operated Class 350 122 arrives at Stafford on October 30th with the 12:12 Liverpool Lime Street to Birmingham New St. service.

'The Spirit of Invictus' LNW's Class 350 111 working 2K87 Stafford - Crewe service is seen at Stafford on October 8th . *Richard Hargreaves*

Greater Anglia completes £6m project at East London depot

Greater Anglia has made improvements to one of its depots to support the new generation of Greater Anglia trains. Orient Way depot is located near Stratford and plays a vital role in servicing Greater Anglia's fleet, with its twelve sidings allowing for the parking and cleaning of trains around the clock.

Works included the installation of 70 new Controlled Emission Toilet (CET) emptying units, provision of over three linear kilometres of new raised walkways and access routes, upgrades to the depot's mechanical and electrical infrastructure, and the installation of a new 16-tonne silo to store the sand used to help trains grip the tracks. CET systems are essential for modern train maintenance, where vacuum-powered hoses are used to safely remove waste from toilet tanks before flushing them through with water.
Waste is transferred directly into the depot's water treatment system and disposed of, with separate hoses used to refill the trains' clean water tanks for toilet cisterns and wash basin taps.

The improvements are part of the train operator's wider £1.4 billion investment programme to modernise its rail services to support Class 720 and Class 745s trains.

Andrew Goodrum, Infrastructure & Major Projects Director at Greater Anglia, said: "This major investment will help ensure Orient Way can support our fleet for many years to come and help us deliver a consistently high standard of service for our customers. Completing this extensive upgrade while keeping the depot fully operational was a significant achievement, and a testament to how our teams can deliver infrastructure improvements without impacting passenger experience."

Greater Anglia is part of GBR Anglia, which brings c2c, Greater Anglia and Network Rail Anglia closer together under one unified leadership team as part of the wider journey towards Great British Railways, which has a key focus on delivering a consistently better experience for passengers.

Fares Advice with RailUK

This month more questions and answers on the complex ticketing system of Britain's Railways.

Ridiculous LNER reservations again

Q: Once again LNER reservations aren't working (1240 Kings Cross to Harrogate), but people are being told they'll have to move if the person with the reservation turns up. LNER are running approximately 50% of their usual service between London and Leeds.

Apparently it's full and standing in Standard but no-one knows which seats will be claimed throughout the journey. On the other hand, the First Class hosts are being marvellously efficient. Here it's just very busy, but a large proportion of people are from other trains so don't know if their seat will be theirs for the whole journey. Seat reservations appeared when we arrived at Stevenage.

A: I'd like to know when LNER changed their policy in this area. Years ago, LNER (and their predecessors) had the same policy as TPE, in that if reservations are not displayed, then there are no reservations and it's just like any other non-reservable train. Where two trains are combined into one, this is the only fair way.
Sadly, LNER now have a policy of invisible reservations and forcing passengers to play "musical chairs" at each stop. Perhaps someone could create an FOI request?
I wonder if David Horne is aware of this, and the numerous other issues that can occur with LNER these days, and if he approved this policy...

TfW not letting you enter station with advance

Q: More absolute nonsense from TfW gate line staff (I assume). At Newport station I had an advance ticket to London, got there a bit early. Ticket wouldn't scan on the new barriers, asked the guy to let me through and he said he can't because advance tickets are only valid for entering the station once the previous train had departed.

I said I've never heard of this rule before. Given it was extremely cold this morning I wasn't best pleased.

Asked him to explain where this rule came from, got told it's "in the contract".

He then brought his duty manager over which to my surprise agreed with him and said it was in the national rail conditions of carriage (it's news to me) and couldn't tell me which section and told me to look harder. By this point the train was 30 mins away so the ticket could scan I could enter. Ironically if I was to care avoid I could have easily made the train before. I've put a complaint in with TfW but I assume there is no rule for this and in reality the barriers are set to reject tickets 30mins before departure and they've inferred that is an actual rule?

This is the second time I've had TfW refuse a valid ticket cos barriers said no (different reason last time).

A: NRCoT 5. Conditions of use
5.1 You must be at the departure station shown on your ticket in good time to catch the train. Maybe next time you can say you are complying with condition 5.1

Most TOCs do seem to have it set not to let people in until a period beforehand, though I forget what it is, maybe 20 minutes? This is silly at places like Birmingham International where there is loads of seating inside but none outside, I've seen them turn a tourist away before which I thought rather unnecessary. I can kind of see both sides. If they let you through early then it's easy for you to get onto an earlier train - whether accidentally for those who don't understand Advance ticket restrictions or intentionally from those chancing it - and then complain that the barriers let you through too soon. However where there are no waiting facilities outside the barriers and especially if it's a particularly cold or hot day where it would be more comfortable to be in a waiting room, I do think it's rather mean not to let you through. The problem is there isn't any strict entitlement to be let through a particular amount of time before departure, so it's not clear they were in breach of contract by refusing to let you through until 30 mins before. Equally the justification that it's "in the contract" is farcical since the contract (NRCoT 5.1) requires the opposite if anything. Clearly one made up by someone who has never read the NRCoT and I think that bit does warrant a complaint, if nothing else so that there's an outside chance the manager and station staff are "disabused of their notions".

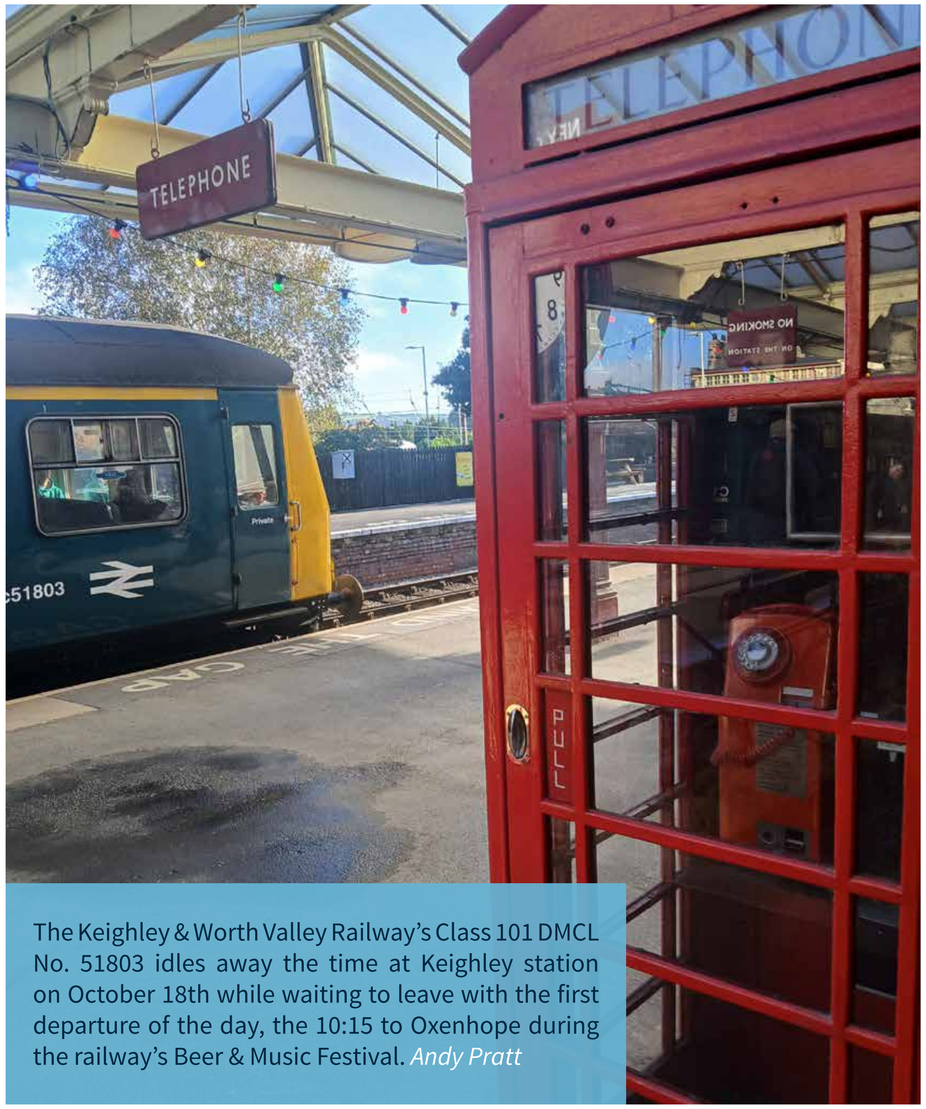

Ticket Advice for All

Advice on rail ticketing is available on railforums.co.uk in the 'Fares, Tickets & Routeing' section. We believe this to be the best source of UK rail fares advice available anywhere, as we have a team of people who are familiar with the complex rail fares system who can help you. Never pay over the odds again, and ask us if you need help! See you there!

National Rail

Class 08 822 eases into Bletchley station an hour early working as 8T05, the 12:27 Bletchley C.S. to Bletchley T.M.D. on October 8th. *Derek Elston*

The Keighley & Worth Valley Railway's Class 101 DMCL No. 51803 idles away the time at Keighley station on October 18th while waiting to leave with the first departure of the day, the 10:15 to Oxenhope during the railway's Beer & Music Festival. *Andy Pratt*

Greater Anglia and c2c encourage people to 'Drop the Robot and Catch Some Fun Times'

Train operators Greater Anglia and c2c are joining forces to encourage people to break out of their everyday routines and take a day out by train, with a new campaign inviting customers to 'Drop the Robot and Catch Some Fun Times'.

For the first time, Greater Anglia and c2c - as part of GBR Anglia - are collaborating on joint marketing activity targeted at the Southend region, where both operators serve customers travelling into London.

GBR Anglia brings c2c, Greater Anglia and Network Rail Anglia together under one unified leadership team, aligning track and train more closely to improve reliability, resilience and customer service across the region.

The campaign aims to inspire people across East Anglia and the Southend area to change their routine and make the most of their free time by taking a day out by train, whether that means enjoying a family trip to London, catching up with friends, visiting an attraction or simply making more of the weekend.

Built around the insight that everyday life can sometimes feel repetitive and robotic, the campaign encourages people to switch off autopilot, try something different and make time for experiences that matter.

Rather than focusing on competition between operators, the campaign has a shared objective: encouraging more people to choose rail for their leisure journeys.

Both Greater Anglia's iconic red hare and c2c's popular character Pip feature in the creative.

The collaboration is a practical example of how the two train operators are working together to deliver benefits for customers and support a more integrated railway.

The integrated campaign will feature across a range of media, including television, cinema and radio, alongside social media, digital advertising and outdoor posters.

Rob Mullen, Chief Customer and Commercial Officer, GBR Anglia, said: "By working together on the campaign, Greater Anglia and c2c aim to reach more people with a simple message: life is for living, and the train can help make those memorable days out happen.

"We have so many great places on our network and we would encourage people to get out there and visit one of the many great destinations we serve."

Both Greater Anglia and c2c have a range of great value fares, and customers should book direct to avoid booking fees.

National Rail

Swietelsky track machine Nos. DR73113 and DR77903 working the 6U19 Fenny Compton - Fenny Compton heads through Leamington Spa on October 13th.
Richard Hargreaves

Network Rail stone blower No. DR80206 passes Northampton working 6U26, the 08:45 Trent Sidings to Woking Up Yard Sidings on October 6th. *Derek Elston*

All change, please! Colourful new look for thousands of railway staff in South East – with old uniforms given second life

Thousands of railway staff across London and the South East are sporting a colourful new look – with their old uniforms going to help jobseekers, schoolchildren and homeless people. More than 5,000 employees across Southern, Thameslink, Gatwick Express and Great Northern have been issued with practical new uniforms designed to keep them smart, comfortable and easy to recognise by customers on stations and trains.

Central to the design is a new Four Brand Stripe, unifying staff across the four train companies and creating a brighter, more consistent look, while ensuring they remain instantly recognisable to customers. Branded neckwear, ties and gilet jackets complement versatile new base layers.

But while staff are stepping out in their new look, GTR's old uniforms are starting a new chapter. Instead of being thrown away, 100 per cent of the retired clothing has been recycled or reused in partnership with a range of charities and community organisations.

From helping disadvantaged men dress for job interviews, providing school uniform for families in Luton, and supporting homeless people in London the uniforms are being used to make a difference.

Lisa Stanford, GTR's Uniform Contracts Manager, said: "I'm delighted to see our new uniform rolled out across Southern, Thameslink, Gatwick Express and Great Northern. As well as giving colleagues a modern and consistent look, it gave us an opportunity to think carefully about what happened to the clothing it replaced. It's fantastic to know that while our staff are enjoying their new uniforms, the old ones are beginning a new chapter helping communities across our network. "By working with charities and community organisations, we've ensured every item can be recycled, reused or repurposed, helping people and reducing waste at the same time."

Uniform unsuitable for reuse will be shredded and recycled, while unworn items have been given a second life through GTR's charity partners:
Suited & Booted , London
Level Trust, Luton
Single Homeless Project, London

At Suited & Booted in London, unworn shirts, trousers, waistcoats and belts are helping disadvantaged men prepare for interviews and employment – with some items already worn by men who have successfully secured jobs. The charity works with HMP Hollesley Bay in Suffolk, youth employment charity SPEAR, job centres and the probation service among other organisations supporting people into stable employment.

Suited & Booted Chief Executive Maria Lenn said: "Demand for our support is huge at the moment and we're so grateful for GTR's generosity in helping our clients find work. The men we support come from all sorts of backgrounds, but they have one thing in common: they want to find work and change their lives. Clothing donations allow us to do that which is wonderful. A smart, well-fitting outfit leaves a lasting impression and the practical clothes donated by GTR will go a long way for the men we work with."

In Luton, donated trousers and skirts have been made available to families through the Level Trust's school uniform exchange at Luton Point Shopping Centre.

Jennie White, Chief Executive Officer at the Level Trust, said: "We're so grateful to GTR for this generous donation. At a time when the cost of living is putting real pressure on family budgets, school uniform is one of those essential expenses that can tip a household into having to decide between purchasing uniform or paying for food or heating. Donations like this make a genuine difference, helping hundreds of children across Luton start the school year feeling confident, comfortable and ready to learn. It's also wonderful to see these uniforms given a second life rather than going to waste, and we're proud to be working with a local partner that shares our commitment to supporting some of the most disadvantaged families in our community."

Meanwhile, winter jackets are supporting people experiencing homelessness through charity Single Homeless Project, which was funded as part of GTR's Your Station, Your Community Fund.

Rail Adventure power cars Nos. 43480 and 43465, with 43468 and 43484 at the rear were employed on September 25th to take ex Avanti West Coast Voyager 221 105 from Derby Litchurch Lane to Barton under Needwood depot. *Bryan Roberts*

Greater Anglia marks first year of public ownership

Greater Anglia (GA) is marking the first anniversary of its transfer into public ownership by highlighting its ongoing progress as one of the best performing train operators in the UK. Over the 12 months since the operator became part of the DFTO group of companies, on October 12th 2025, the GA team has been fully focused on delivering an even better service for its customers and communities and using its journey towards Great British Railways (GBR) to enable further enhancements.

GA continues to have the best annual "on time" performance of any train operator in the UK and is also taking advantage of its transition to being part of GBR Anglia – a unified railway combining Greater Anglia, c2c and Network Rail Anglia – to collaborate even more closely with its partners to achieve even more consistent punctuality and reliability. That includes working to address the increasing challenges presented by extreme weather, which have caused some disruption on parts of its network during the unprecedented hot, dry summer of 2026 and necessitated additional speed restrictions in some places. Work is ongoing to complete the work necessary to remove those restrictions and maintain and improve the very high standards and service consistency for which the operator is recognised.

Meanwhile GA has delivered a number of significant service improvements over the last 12 months including:

Opening of two new stations, in partnership with Network Rail colleagues, at Beaulieu Park, on the Great Eastern Main Line north of Chelmsford, and Cambridge South, adjacent to the bio-medical campus at the southern end of this thriving city, both of which are already proving extremely popular

Extension of contactless ticketing availability out to Stansted Airport, Witham and Southend Victoria in March 2026, with over 1.5 million additional contactless journeys made since then

Timetable improvements on local lines in Suffolk, Norfolk and Cambridgeshire in May 2026, to provide more frequent and convenient services

Enhanced integrated transport links with new bus information screens now at 5 stations (Cambridge, Chelmsford, Great Yarmouth, Ipswich and Norwich) and increased promotion of bus, cycle and walking options for getting to and from stations

Achieving a record annual rail market share for travel to Stansted Airport of over 35%

Continuing its excellent Customer and Community Improvement Fund initiatives, supporting its Community Rail Partnerships and helping its highly successful station adoption scheme continue to flourish, with more adopters and more wildlife friendly stations.

In addition, as GA comes together with c2c and Network Rail, as part of GBR Anglia, closer coordination has delivered a number of benefits including a trial of overnight Stansted Express services to/from Stansted Airport on Friday nights from July to September 2026; working to prevent disruption by fitting special rail infrastructure monitoring equipment to six GA trains (thereby preventing 15 separate disruptive incidents), making more targeted use of engineering works to improve reliability and service resilience; collaborating even more effectively on special events for occasions such as Southend Utd playing at Wembley, and developing joint marketing campaigns.

Looking ahead, GA is planning more joint initiatives with c2c and Network Rail colleagues, including greater coordination of essential engineering work, so it causes less disruption to passengers, and more work with wider stakeholders to secure investment in rail projects to support both economic growth and social inclusion, across East Anglia, in the years ahead.

Rail Minister Lord Hendy said: "Greater Anglia is showing the benefits of public ownership in action, with strong punctuality, new stations, expanded availability of contactless ticketing, work with partners on improvements to freight services and closer collaboration across the wider railway through GBR Anglia. This progress shows exactly what Great British Railways can achieve nationwide, bringing track and train together to deliver a simpler, more reliable railway that supports jobs, growth and new homes."

Jamie Burles, Managing Director of GBR Anglia, said: "Greater Anglia has used its first year in public ownership to keep on improving and innovating, and to make rail travel even more attractive and convenient, right across our region. With ongoing high levels of punctuality, new stations, additional services, more convenient ticketing and other improvements, we're always focused on making our railway even better for those who travel with us and depend upon us. I'd like to thank colleagues right across Greater Anglia, and the wider GBR Anglia family, for everything they do to provide the best possible service, round the clock, every day. But we know there's much more to do - and we're passionate about doing better still, for customers and communities across our network, as we continue our journey to GBR."

Heavy Haul Rail operates first direct freight train to Sizewell C

Heavy Haul Rail has operated the first commercial freight train delivering construction materials directly into the Sizewell C nuclear power station site, marking a significant milestone for both the project and the rail freight industry.

Delivering on behalf of our customer, Tarmac, the inaugural train delivered more than 1,000 tonnes of aggregate to the Suffolk construction site via the new Green Rail Route, which connects directly to the upgraded Sizewell branch line.

The train forms part of a new overnight rail operation from Tarmac's quarries in Derbyshire helping to maintain a reliable supply of materials for one of the UK's most important infrastructure projects.

Rail will play a key role in Sizewell C's logistics strategy, with the project targeting 60% of materials to be transported by rail or sea. Each train removes the equivalent of around 50 HGV journeys from local roads, helping to reduce congestion and lower carbon emissions.

Dave Penney, CEO at Heavy Haul Rail, said: "These first commercial freight train deliveries directly into the Sizewell C site are a landmark achievement for everyone involved in the project. This milestone demonstrates the success of years of planning, investment and collaboration to create a dedicated rail connection capable of supporting major construction activity, while reducing the impact on local roads and communities.

"We are proud to have been part of these first deliveries, transporting more than 1,000 tonnes of aggregate for Tarmac and helping establish rail as a key component of Sizewell C's long-term logistics strategy."

Will Pearson, Nuclear Commercial Director at Tarmac, said: "The arrival of the first trains is an important milestone for the Sizewell C project. Delivering the volume of materials required for a construction programme of this scale demands a reliable and flexible supply network, which we've worked closely with our logistics partners and the Sizewell team to establish and operate.

"Alongside our marine and rail operations at Barham and Ipswich, these direct rail deliveries are helping to maintain a consistent flow of high-quality aggregates to site, while reducing the impact on local roads and supporting the project's freight objectives. The UK rail freight system is world-leading and capable of operating at over 97% efficiency, making rail an ideal means of supplying program-critical projects.'"

The nuclear power station is expected to be completed in the mid-2030s, providing clean and reliable energy to some six million homes.

National Rail

Leaf-busting trains to clear more than 90,000 miles of railway this autumn – enough to circle the world three-and-a-half times

As temperatures drop, the evenings draw in and millions of leaves fall across the Great Western route, Network Rail's specialist 'leaf-busting' trains are hard at work tackling one of the railway's biggest seasonal challenges.

Leaves on the line might sound harmless, but they can cause serious problems for the railway. When damp leaves fall onto the tracks and are crushed by passing trains, they form a thin, slippery layer on the rails, much like black ice on a road. This reduces the grip between a train's wheels and the rail, meaning drivers need to brake earlier when approaching stations and signals and accelerate more gently to avoid wheel spin. These precautions keep trains moving safely, but can add time to journeys and lead to delays. A build-up of leaf mulch can also interfere with train detection equipment used by the signalling system.

This is where the four leaf-busting trains on the Great Western route, known as rail head treatment trains (RHTTs), come in. They use high-pressure water jets to blast slippery leaf mulch from the rails before applying a special treatment to improve grip, helping passengers get to where they need to be safely and reliably.

These trains will operate from the start of October through to mid-December, clocking up around 90,100 miles in total – enough to circle the world just over three and a half times.

This year, additional routes have been incorporated into the treatment plan for the first time, including the Okehampton and Barnstaple branch lines in Devon, which will be treated twice a week. Previously, difficult-to-reach locations were treated manually by mobile operations managers who applied sand to the rails by hand.

Heavy rain, strong winds and cooler temperatures can also affect the railway, so Network Rail and train operators spend months preparing to minimise disruption and keep passengers moving safely and reliably throughout autumn.

In addition to the rail head treatment trains, Great Western route has been preparing for the challenges of autumn in other ways, including:

Specialist weather forecasting, supported by meteorologists at MetDesk. This provides an early indication of potential weather-related risks, which in turn enables better preparation and management of any impacts to the railway.

Alongside weather forecasts, Great Western route's Control teams receive leaf-fall forecasts twice a day during the autumn, showing rail-adhesion conditions, the percentage of leaves remaining on trees, and the percentage of leaves on the ground. This provides a clearer picture of how leaf fall is progressing and where the risk of contamination is greatest, allowing resources to be targeted where they're needed most.

Preventative measures, including vegetation management along the Barnstaple and Okehampton lines to manage leaf-fall contamination and reduce the risk of trees and branches falling onto the railway during storms.

Drainage improvements at locations that have previously been vulnerable to flooding, including at Roche on the Newquay line and through Wivelscombe Tunnel between Saltash and St Germans. Drainage systems were cleared this summer in the Bristol area, and the wider resilience programme at Chipping Sodbury in Gloucestershire includes a number of measures to help reduce the risk of major flooding and disruption.

Building on the successful trial of new monitoring technology designed to improve understanding of flood risks. At one location in Devon, sensors have been used to measure water movement at both the river surface and riverbed, helping engineers assess the risk of scour, where fast-flowing water can erode material around bridge foundations. The data supports computer modelling that can indicate whether a bridge may have been affected following severe weather. This can reduce the need for some manual inspections by divers and help lines reopen sooner. Previously, divers could only inspect structures once river levels and water velocity had reduced to safe levels, potentially extending the length of time the railway remained closed.

Jo Grew, Route Strategy Director for Network Rail's Great Western route and GWR, said: "Autumn brings a range of challenges for the railway, and we prepare year-round to reduce their impact and keep passengers moving safely.

"Our rail head treatment trains will be out in force until mid-December, clocking up more than 90,000 miles as they work to keep the rails free from leaf-fall contamination.

"This year we've expanded the coverage of the RHTTs and introduced a new timetable to help us direct resources to the areas that need them most. We're also trialling a new treatment product in Gloucester, which leaves a water-resistant layer on the rail and could reduce how frequently treatments need to be applied.

"It's all part of the huge amount of work that goes on behind the scenes to reduce the impact of autumn weather and keep passengers moving safely and reliably."

Loram PN: In-cab signalling fitted to second NR On Track Machine

Loram has begun fitment of ETCS digital in-cab signalling equipment to a second of its Rail Grinders that provide precision rail-profile-treatment capabilities to Network Rail's regions. The C44 Rail Grinder, vehicle C44-02, is being fitted with an Hitachi Rail ETCS system at Loram's engineering facility in Derby. It is Loram's first ETCS fitment to be funded through the East Coast Digital Programme (ECDP). ETCS fitment to the C44 Rail Grinder follows the successful introduction of Hitachi Rail ETCS equipment on Loram's new RGC rail grinding unit earlier this year.

The initial installation and commissioning of ETCS on the RGC machine and its subsequent roll out to the C44 machine is a result of close collaboration between Hitachi Rail, Network Rail and Colas who operate the C44 grinder. Fitment to the C44 began in June this year by Loram's Derby based engineering and installation teams, closely supported by industry partners.

Lee Tinney, Managing Director of Loram EMEA said: "Following successful introduction of ETCS to our RGC Rail Grinder I am delighted that we are now expanding our ETCS fitment programme to the C44 grinder fleet, three of which are deployed by NR to support track maintenance and management teams across the network. I'd like to thank Loram's engineering and installation teams, as well as our partners at Hitachi Rail, Network Rail, the East Coast Digital Programme and Colas for their support with this fitment programme, which is helping us to showcase how ETCS can be fitted to On Track Machines both cost effectively and at pace."

Chris Hobden, Programme Director (ECDP), Network Rail said: "We're pleased to see continued progress from Loram, and partner collaboration, to deliver digital in-cab signalling to another on track machine. This pioneering work with grinders will provide valuable learnings for the OTM sector as a whole. Progressing OTM fitment is an important part of our overall strategy to get to signals away on the East Coast Main Line, the end goal being a more reliable, more capable and even safer railway for customers."

Paul Maynard, VP Mainline Signalling, Hitachi Rail SRS UK said: "The installation of ETCS on a second Loram rail grinder highlights the momentum behind digital railway transformation in the UK. As the East Coast Digital Programme continues to progress, it is essential that engineering fleets are equipped to operate seamlessly within a digital signalling environment. For Hitachi Rail, this is another important example of how we are applying our digital signalling expertise across a diverse range of rail vehicles, supporting the industry's transition to ETCS. By working collaboratively with our industry partners, we are demonstrating that ETCS can be delivered effectively on specialist on-track machinery, helping to unlock the benefits of increased safety, improved operational flexibility and greater network performance."

The installation programme will shortly see static testing at the RTC in Derby with subsequent dynamic testing taking place at NR's Test Track facility at Melton towards the end of the year. Hand-back of C44-02 to Colas for operational deployment across the network will take place in early 2027. Following evaluation in operational service, a third Loram Rail Grinder (C44-03) will enter the ETCS fitment programme in Derby.

Initially C44-02 will operate in 'ETCS dormant mode' prior to activation of ETCS Level-2 following an agreed approvals and assurance process, as part of NR's planned signals-away programme on the southern part of the East Coast Main Line and other agreed routes. The successful installation of ETCS on C44-02 represents another important milestone in preparing Loram's Rail Grinders for the evolving digital railway and demonstrates the benefits of close collaboration between all organisations involved in delivering this key safety and capacity programme.

Northern's Class 150 270 sets off from its call at Pleasington with a Preston to Colne service on October 29th. *John Sloane*

Northern's Class 150 108 calls at Pleasington with a Colne to Preston working on October 29th. *John Sloane*

First steelwork installed at new Shipley TrainCare Centre

On Friday October 23rd, the Transpennine Route Upgrade (TRU) hosted Anna Dixon, MP for Shipley, Councillor Eleanor Thomson, and Michael Sasse, Rail Policy Manager at WYCA, to view the first steelwork installed which will form the framework of the new multi-million-pound TrainCare Centre in Shipley.

The day provided an opportunity for stakeholders to hear directly from TRU and Northern colleagues about the most recent developments at the site, as well as the long-term economic benefits that will be unlocked for the local community upon its completion.

The purpose-built facility has already received over £160m of funding to transform a former brownfield site into the new permanent home of Northern's electric train fleet in West Yorkshire once works are completed.

Its creation will serve a critical role in delivering a resilient railway across the north of England, as it will enable trains to continue operating on the Airedale and Wharfedale lines while major work takes place in and around the Neville Hill TrainCare Centre during a future phase of planned TRU improvements.

Shipley TrainCare Centre will bring up to 100 skilled jobs to the area, which will remain after the conclusion of the Transpennine Route Upgrade, meaning local communities will benefit from long-term employment opportunities.

Anna Dixon MP said: "It was brilliant to again visit the Shipley TrainCare Centre and see first-hand the fantastic progress that has been made on its construction. Bringing the skilled, high-quality jobs of the future to the Shipley constituency has always been one of my top priorities as MP, and having this facility here will give local people the chance to build long-term careers right on our doorstep.

"And importantly, the benefits aren't just confined within the depot gates. More people in well-paid jobs in the heart of Shipley will mean more spending in our shops, cafés, and businesses, further helping in the revitalisation of the town centre.

"From what I have seen today, I am confident that this development will make a real and lasting contribution to Shipley's growth, and in unlocking the full potential of the wider region."

Adam Sellers, TRU senior sponsor, said: "Great progress is being made our Shipley site, so we were delighted to have our senior stakeholders see this firsthand, and to provide a detailed update on the benefits this site will bring to not just railway resilience in West Yorkshire, but the local economy.

"TRU is committed to supporting local communities and providing local jobs, and this new depot will ensure we leave a positive lasting legacy in the town."

Euan Smith, Director of Fleet at Northern, said: "It is exciting to welcome some of our key stakeholders in the area to the site of Shipley to illustrate the tangible progress being made towards the construction of the facility.

"The Shipley TrainCare Centre will play a key role in allowing Northern to continue to deliver services for customers across the region while upgrades will be carried out at Neville Hill.

"This will enable us to be a resilient operator and meet the demands of our customers and our network, all while futureproofing the railway for further investment and projects."

National Rail

Grand Central fleet approval brings digitally-signalled high speed services closer

The first digitally-signalled high speed services in the country have moved a step closer with Grand Central's Class 180 fleet receiving the regulatory approval known as APiS* for the 'first in class' fitment of ETCS (European Train Control System). This paves the way for the fleet of 10 vehicles, retrofitted by Alstom with digital signalling equipment, to operate with its ETCS enabled.

Grand Central – Arriva Group's open access operator – will see their Angel Trains-owned fleet undergo software updates and then enter into an extended period of 50,000 miles of 'fault free running' in December. Alongside this, the company's train drivers are being trained in using Level National Train Control (L-NTC) mode, for operating ETCS fitted trains over conventionally signalled routes. The fleet is expected to begin using digital in-cab signalling (ETCS Level 2) on the East Coast Main Line (ECML) between Welwyn and Hitchin by spring 2027.

The introduction of digital signalling through the East Coast Digital Programme (ECDP), will deliver more efficient, more reliable and greener services over the long term. The system also makes the railway even safer as it supervises the train's speed and can bring it to a stop if needed.

Chris Brandon, director at Grand Central Rail, said: "Getting to this milestone has taken a lot of hard work by colleagues within GC, our train owner Angel Trains and our technology partner Alstom. I would like to congratulate everyone involved. However, there is much work to do before we are ready to begin ETCS enabled services on the mainline and we will continue to focus on achieving this goal."

Chris Hobden, Network Rail's programme director, ECDP, said:

"It is a pivotal achievement for us to receive approval for a retrofitted fleet, and I am grateful for the hard work across all partners involved in what has been quite a challenging process.

"Securing this approval supports our progressive roll out of digital signalling on the ECML. The Grand Central 180 fleet will point the way for further major passenger fleets, to begin using digital signalling between Welwyn and Hitchin during 2027."

Steve Wilson, project director, Alstom, said "Reaching APiS for the Class 180 – our first passenger fleet retrofit – is a significant milestone and the culmination of years of hard work, determination and technical innovation. It is a real testament to the collaborative approach across Alstom, Grand Central, Angel Trains, NJRP** and ECDP, and I would like to recognise everyone, past and present, who has contributed to getting us to this point. APiS is an important achievement but it is also the start of the next phase of our journey. Our focus now turns to supporting the fleet through fault-free running and towards ETCS Level 2 operation on the East Coast Main Line in 2027."

Matthew Prosser, asset management director at Angel Trains, said: "Retrofitting ETCS is highly complex and we are therefore extremely proud to have supported the achievement of this first in class milestone on our Class 180 fleet. Aside from providing greater operational flexibility, the fitment of ETCS supports skilled jobs within the supply chain and aligns with the Government's Rail and Infrastructure Plan. We look forward to working with our industry partners in rolling ETCS out across our fleets in the future."

The East Coast Digital Programme (ECDP) is a landmark scheme that will introduce digital in-cab signalling on the southern part of the East Coast Main Line. In 2025 it delivered the country's first 'no signals' commuter railway, between Finsbury Park and Moorgate.

Since August 2026, some Great Northern services have begun using digital signalling in the Welwyn to Hitchin area on the East Coast Main Line. More fleets and services are expected to begin using digital signalling during 2027, including the Grand Central Class 180 fleet.

Drone technology takes flight to strengthen East Coast's response to severe weather on the railway

Network Rail is exploring how drones could help teams respond more quickly and safely to flooding, storms and other weather-related incidents on the East Coast Main Line. Drone flight exercises near Doncaster are demonstrating how aerial imagery can give engineers an early view of railway infrastructure and help identify areas in need of closer inspection. The exercises form part of Network Rail East Coast's evaluation of the technology and its potential uses.

Extreme weather can present a serious challenge for the railway. Summer 2026 was the UK's hottest on record. Meanwhile, the winter half-year (October to March) for the most recent decade, 2016–2025, has been 3% wetter than 1991–2020, and 13% wetter than 1961–1990. During extreme weather, some parts of the railway can be difficult or potentially hazardous to reach, which can cause delays and cancellations. Drones can allow teams to gather initial information remotely, helping them understand conditions on the ground and decide where engineers need to inspect more closely. The technology can provide aerial views following storms and high winds, monitor water levels during flooding and inform decisions about whether train services can operate. By helping

teams understand the condition of the railway sooner, drones have the potential to support a faster and safer response to disruption, helping to keep passengers on the move.

Network Rail is already using the technology in other parts of the country, with positive results. Across a wider range of incidents, including flooding, trespass and lineside fires, the East Midlands route reported savings of approximately £100,000 between September 2025 and March 2026.

John Grainger, joint head of performance, Network Rail East Coast & LNER, said: "Severe weather can make parts of the railway difficult to reach at times when we most need accurate information to help our teams make the best decisions for our customers and colleagues. Drones have the potential to give a much quicker view of what is happening, whether that means checking for damage following high winds or monitoring water levels during flooding. Drone tests have shown that they can support and complement our expert engineers and more traditional inspection methods, providing an extra pair of eyes during challenging times. We want to deliver the best service that we can for our customers as they travel by train. Embracing technology like this helps us keep everyone safe and allows us to get trains moving as quickly as possible after disruption."

Wales and Borders first to use railway communication masts for new weather monitoring technology

Network Rail's Wales and Borders route has become the first in the organisation to install local weather stations on existing GSM-R railway communication masts, providing more accurate, real-time information to help teams respond to severe weather. Ten stations have been installed across Wales and Borders, measuring rainfall, wind speed and direction, temperature, humidity and atmospheric pressure directly from locations on the railway.

The technology, developed by Ninehundred Communications Group, follows lessons learned from a series of severe weather events which have caused significant disruption and cost to the railway. Between February 2023 and January 2026, 25 named storms affected the Wales and Borders route. Where complete performance data is available, each storm caused an average of more than 38 hours of delays and £179,000 in train performance costs.

Storm Darragh was the most costly, at £1.3 million. When it hit Wales on 6 and 7 December 2024, winds reached 93mph at Capel Curig, with fallen trees and debris disrupting services across many parts of the country.

The investment comes as the Met Office forecasts an increased chance of wetter and windier than average conditions through late autumn and early winter, due to weather patterns like El Niño.

Better local information

The stations have been installed at Whitland, Llantwit, Cilmeri, St George's and Trewyn in south and mid Wales, and Craven Arms, Gobowen, Glantwymyn, Llanrwst and Buckley across north Wales and the Borders. The locations were selected to fill gaps in existing weather monitoring and provide better information in areas vulnerable to severe weather.

Network Rail already works with weather forecasting specialists MetDesk to monitor conditions and anticipate severe weather. The new stations will enhance this by providing local readings directly from the railway, giving operational teams a clearer picture of the conditions being experienced on the ground. Using existing GSM-R communication masts provides the height required for the observations while avoiding the cost and complexity of constructing separate installations. Data from the stations will also help MetDesk improve its forecasts and Network Rail refine its operational weather thresholds, giving teams greater confidence about when and where severe weather could affect the railway. This could allow a more targeted response - from deploying teams and inspections to informing when measures such as speed restrictions are needed - helping keep the railway safe while reducing unnecessary disruption for passengers.

Daniel Booth, Head of Operational Weather Strategy at Network Rail Wales and Borders, said: "Autumn is always one of the most challenging periods of the year for the railway, and a huge amount of preparation goes into reducing the impact on passengers and freight customers. On the Wales and Borders route, we're always looking at how new technology can help us better understand and respond to the challenges our railway faces. These new weather stations are a great example of that, giving our teams access to more accurate, localised information about conditions on the ground. By learning from events like Storm Darragh and working closely with our weather forecasting partners, we can make better-informed decisions, respond earlier to changing conditions and ultimately help keep the railway running safely and reliably."

Alongside the new weather stations, Network Rail is stepping up its wider autumn preparations across Wales and Borders, with four specialist treatment trains set to treat more than 54,400 miles of track. Teams have also carried out targeted drainage improvements at locations prone to flooding, increased vegetation management to reduce the risk from falling trees and branches and have 10 dedicated Autumn Response Teams ready to respond to changing conditions.

National Rail

Christmas rail investment at Doncaster to deliver more reliable journeys on East Coast Main Line

Passengers are advised to plan ahead while a major programme of railway upgrades is carried out over the festive period, with no services able to call at or pass through Doncaster station on Christmas Eve.

Network Rail engineers will renew 11 switches and crossings units – which allow trains to move between tracks – at Marshgate Junction, one of the busiest and most important pieces of railway infrastructure in the area.

At the same time, teams will renew more than 640 metres of track through Doncaster station. The work will replace assets that have reached the end of their working life, helping to reduce faults and improve the long-term reliability of train services on the East Coast Main Line.

To help minimise disruption, the project will start in the early hours of December 24th – a day when fewer services run – and continue over Christmas Day and Boxing Day, when no passenger trains operate on the East Coast Main Line. Trains are planned to resume through Doncaster on Sunday December 27th.

Passengers should also note that a major upgrade of overhead power lines will mean no services to or from Birmingham New Street from December 24th to 28th.

John Grainger, joint head of performance, LNER & Network Rail East Coast, said: "This important investment at Doncaster will help deliver a more reliable railway for passengers and freight on one of the UK's busiest rail routes. We're sorry for the disruption these essential upgrades will cause. We've planned the work to take place when fewer trains are running to minimise the impact as much as possible, and we encourage anyone travelling over the festive period to check their journey in advance with their train operator or National Rail."

A spokesperson for the train operators said: "We're working closely with Network Rail to help customers travel on Christmas Eve during this essential programme of railway upgrades at Doncaster.

"While there will be changes to services on this date, these improvements will help deliver a more reliable railway. Customers should check before they travel and allow extra time for their journey where rail replacement buses or coaches are in operation."

The Doncaster work will mean the following changes to services on December 24th:

CrossCountry will have no service between Reading and Newcastle via Doncaster, and no trains will call at Wakefield Westgate.

For East Midlands Railway, the 06:33 Peterborough to Doncaster train will terminate at Lincoln at 07:44 and will not call at Saxilby, Gainsborough Lea Road or Doncaster. A connecting rail replacement bus will run between Lincoln and Doncaster, calling at Saxilby and Gainsborough Lea Road. For the remainder of the day, buses will replace trains between Lincoln and Doncaster.

There will be no Grand Central, Hull Trains or East Coast Lumo services.

LNER services will run between London King's Cross and Retford/Lincoln and between York and Scotland. Rail replacement coaches will run between Newark North Gate/Doncaster and York, and between Retford and Leeds calling at Doncaster, Wakefield Westgate and Leeds.

Northern services will not run between Hull and Sheffield; Scunthorpe and Doncaster; Leeds and Doncaster, or Leeds (via Moorthorpe) and Sheffield.

In addition:

Trains between Scarborough and Sheffield will run only between Scarborough and Hull.

Trains between Hull and Doncaster will run only between Hull and Hatfield & Stainforth.

Trains between Adwick and Sheffield will run only between Conisbrough and Sheffield.

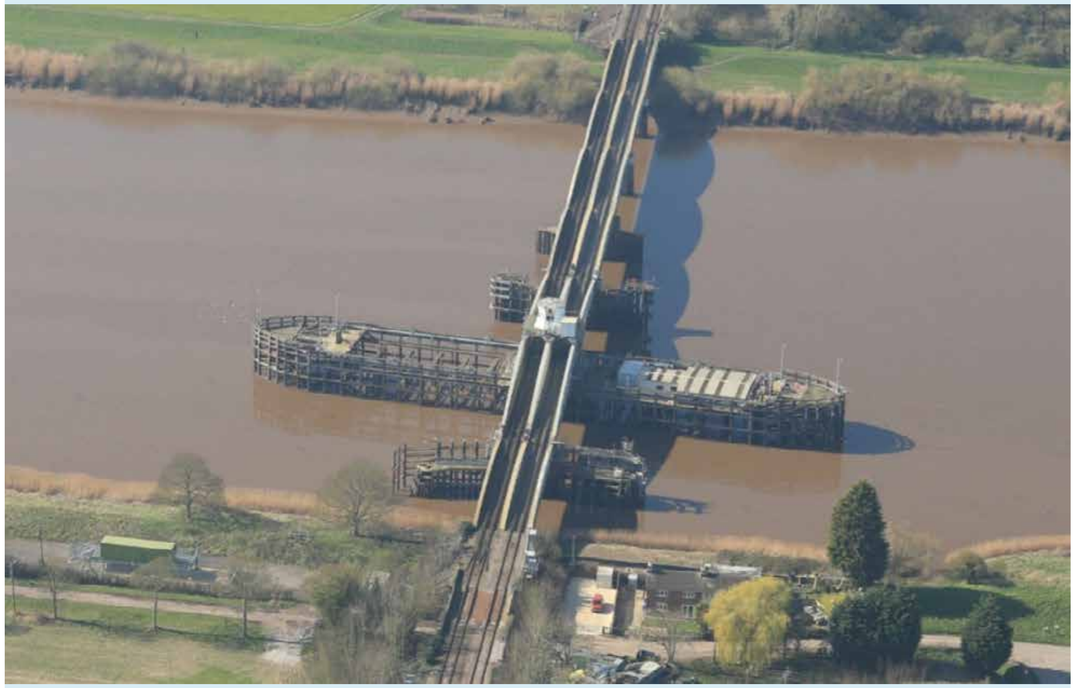

Replacement buses will run between Wakefield Westgate and Doncaster; Goole and Meadowhall (calling at Doncaster only); Goole and Conisbrough (calling at Hatfield & Stainforth, Kirk Sandall and Doncaster); and Scunthorpe and Conisbrough (calling at all stations normally served by trains).

TransPennine Express services between Liverpool Lime Street and Cleethorpes will run between Liverpool Lime Street and Sheffield and between Scunthorpe and Cleethorpes. A replacement bus service will run between Sheffield and Scunthorpe.

The Christmas 2026 work at Doncaster is the first half of the overall project, with the remainder of Marshgate Junction's switches and crossings being upgraded over the same dates in December 2027.

Passengers using rail replacement services are reminded to only bring luggage they can carry comfortably, which doesn't exceed the limits of the operator they are travelling with, and be mindful of transfer times between train and bus/coach.

Investment to boost reliability at Goole Swing Bridge

Network Rail is investing £200,000 to renew key equipment at Goole Swing Bridge and keep trains running safely and reliably over the River Ouse. Network Rail teams will replace power cables and renew 16 control units that play a crucial role in ensuring the bridge is correctly positioned for trains to pass safely. The upgrade will improve the reliability of the infrastructure and reduce the risk of equipment failures that could affect journeys.

Grade II*-listed Goole Swing Bridge is one of the largest and oldest surviving railway swing bridges in the UK. It opened more than 150 years ago and continues to carry passenger and freight services while allowing river traffic to pass through the busy waterway.

Much of the bridge's machinery dates back to the Victorian era, making it one of Network Rail's most distinctive and historically significant pieces of infrastructure.

The investment forms part of Network Rail's ongoing programme of maintenance and renewal work to keep the railway running safely and reliably for passengers and freight operators.

The bridge also benefited from a major refurbishment programme in summer 2023, modernising its operating systems and upgrading hydraulic turning and jacking systems, control systems, electricity supply and navigation lights.

Mark Hayles, Network Rail head of route operations, said: "This £200,000 investment at Goole Swing Bridge will replace ageing equipment with modern, more reliable components, helping us maintain a safe and dependable railway for passengers and freight customers.

"By renewing power cables and key control units, we're reducing the risk of faults and helping to keep trains moving reliably through this important location.

"We're sorry to anyone whose journey will be affected while we carry out this work, thank passengers for their patience while these essential upgrades are completed."

£115m investment takes flight at Manchester Airport station

A major £115 million investment into Manchester Airport station will start this Winter to improve future connectivity at one of the Britain's most important transport hubs.

Network Rail and its contractor Kier will deliver the significant upgrades between now and 2028.

The investment will see:

Platforms 1, 2 and 3 extended to allow more trains to serve them
Upgrades to track layouts on the approach to the station
Signalling systems for trains upgraded and modernised
For future rail passengers, the upgrades will create additional capacity, support the operation of more trains and help deliver more reliable and efficient journeys.

The project is part of the wider Manchester Rail Upgrade, to build a bigger, more reliable and better-connected railway for millions of passengers across the North West. It will also support future passenger growth and improve connections to the airport, helping to strengthen Manchester Airport's role as a gateway for business, tourism and international travel. This investment highlights how public ownership of the railways under Great British Railways (GBR) can deliver for passengers.

Rail Minister Lord Hendy, said: "Manchester Airport is a vital transport hub and this £115 million investment from government will deliver more reliable services, increase capacity, and improve connections for the millions of passengers who use the station every year. This is the sort of improvement Great British Railways will be designed to deliver. By bringing track and train closer together under public ownership, we can take a more joined-up approach to investing in the railway, improving performance, putting passengers at the heart of every decision and growing the economy in the North."

The first major stage of the programme will take place on Sunday December 6th 2026, when Manchester Airport station will be temporarily closed for one day.

During this time, engineers will install a utility bridge across the railway which will house electrical cables.

This will allow a bridge structure used by Manchester Airport Group to be removed at Easter 2027, before a new one is constructed later in the year.

Simon Daly, Network Rail senior sponsor, said: "This £115 million investment represents a major commitment to improving one of the country's most important transport interchanges.

"Manchester Airport station plays a vital role in connecting people across the country so these improvements will create more capacity for passengers, allow longer trains to serve the station and improve the reliability of services for years to come.

"The station closure on 6 December is an important first step in delivering these benefits. We recognise that any disruption is inconvenient and have worked closely with our partners to put plans in place, so passengers are kept on the move."

Network Rail is working closely with Manchester Airport Group, Transport for Greater Manchester and train operators to minimise disruption and keep customers moving throughout the closure.

Chris Nutton, TransPennine Express major projects & TRU director, said: "We'd like to thank our customers in advance for their patience while this major investment is delivered at Manchester Airport station. The £115 million upgrade will bring long-term benefits for everyone who travels through the station, creating more capacity, improving reliability and supporting more frequent services in the future.

"We are working closely with Network Rail and our industry partners to minimise disruption during the work and would encourage customers to check their journey before travelling while these essential upgrades are taking place."

Manchester Airport station will be closed for one day on Sunday 6 December 2026 to allow engineers to safely begin work. The station will reopen as normal on Monday 7 December.

Rail replacement buses will operate between Wilmslow and Manchester Airport, with additional staff on hand to assist customers throughout the day. Metrolink services will not be affected by the work.

New Hither Green footbridge opens as £28m programme hits latest milestone

A major milestone has been reached in improving accessibility at Hither Green station for Southeastern passengers.

On Friday October 2nd, the new footbridge linking all platforms opened to passengers as part of the Access for All programme.

The footbridge has been installed and tested, marking a major step towards improving accessibility and passenger movement. It will eventually connect the platforms with the new station entrances on Fernbrook Road and Springbank Road.

The programme also includes four new 16-person lifts, staircases and a link passageway between platforms 4 and 5.

Once complete, the new facilities will provide step-free access from street level to the footbridge and all platforms, improving access for disabled passengers and those travelling with luggage or pushchairs.

Engineers are ahead of schedule on the £28m Department for Transport-funded programme. Completion is now planned for spring 2027, when step-free access from street to platform will be available for the first time.

New CCTV, a public address system, customer information screens, a ticket vending machine and Oyster card readers will also be installed.

The adjacent nature reserve will also be restored, with replanting to support environmental recovery and biodiversity.

Network Rail is managing the programme, with principal contractor BAM Nuttall Ltd delivering the construction alongside architects Fereday Pollard & Partners and civil engineering designers Arcadis. McNealy Brown Ltd is fabricating and installing the main structure. The programme is expected to be fully complete by spring 2027.

Ke’arne Graham, Scheme Project Manager, said: “Opening the new footbridge is a major milestone for the Hither Green Access for All programme, bringing us closer to step-free access across the station. I thank passengers and the local community for their patience as work continues.”

Gresley Society strengthens its leadership following a landmark anniversary year

The Gresley Society Trust, founded in 1963 to honour the life and works of Sir Nigel Gresley, is pleased to announce the appointment of Mark Allatt as Vice Chairman and of Keith Ashford C.Eng MIMechE as a Trustee.

The appointments follow a landmark year in which the Society marked the 150th anniversary of Sir Nigel Gresley's birth and returned its Class N2 No. 1744 to traffic on the North Norfolk Railway after an extensive overhaul.

Mark Allatt has served as a Trustee of the Society since 2024 and has led much of its public communications, including the Gresley 150 programme. He brings more than three decades of heritage railway leadership. He was associated with The A1 Steam Locomotive Trust for 30 years, 27 of them as a Trustee, and spent 16 years as its Chairman. In that time, he played a central part in the fundraising, marketing and public profile of Peppercorn Class A1 No. 60163 Tornado and later directed the project to build Gresley Class P2 No. 2007 Prince of Wales. He has also chaired the LNER Society.

Keith Ashford was appointed Locomotive Manager for No. 1744 earlier this year. A Chartered Member of the Institution of Mechanical Engineers, he brings more than 50 years' experience with the North Norfolk Railway, where he served as Chief Mechanical Engineer for seven years until his retirement in April 2026. He is a volunteer Trustee Director and Chief Mechanical Engineer of the Midland & Great Northern Joint Railway Society. His election to the Society's Board places the care of Sir Nigel Gresley's oldest surviving locomotive at the centre of trustee decision-making.

Philip Benham MBE, FCILT, Chairman of The Gresley Society Trust, said: "I am delighted that the Trustees have appointed Mark Allatt as Vice Chairman and have welcomed Keith Ashford to the Board. Together they strengthen the Society for the years ahead, in the service of our founders' purpose: to preserve a working Gresley locomotive and to educate new generations about his life and work.

"Mark has already made a substantial contribution to the Society's work and public profile, and he brings rare experience of leading major heritage railway projects. His success with funding raising for our class N2 has been a key factor in ensuring the locomotive's final return to steam, while his drive and enthusiasm have been crucial to the delivery of this year's important 'Gresley 150' programme.

"Keith's appointment as a Trustee is a natural follow on from his work as Locomotive Manager for No. 1744 and gives the Board first-hand engineering leadership as we care for Sir Nigel's oldest surviving locomotive. That he oversaw the final phase of the locomotive's overhaul means that he brings unrivalled knowledge to this vital role."

Mark Allatt, Vice Chairman of The Gresley Society Trust, said: "It is an honour to take on the role of Vice Chairman. Sir Nigel Gresley's work still captures the public imagination, as this 150th anniversary year has shown. I look forward to supporting Philip and my fellow Trustees as we build on that interest and tell Gresley's story to a wider audience."

Keith Ashford C.Eng MIMechE, Trustee and Locomotive Manager, said: "No. 1744 is now back at work, and keeping her there is a responsibility I take seriously. Joining the Board will help us plan her care properly and repay the confidence the North Norfolk Railway has shown the Society."

The Gresley Society Trust is a registered charity founded in 1963. It owns Gresley class N2 No. 1744, now operating on the North Norfolk Railway, and Gresley Buffet Lounge Car No. 1852, the sole surviving vehicle from the 1938 'Flying Scotsman' train.

Young Hopetown Darlington Female Team Member Helps Drive the Future of Heritage Rail

A Hopetown Darlington team member is celebrating a major personal milestone after joining the support crew of the world-famous steam locomotive No. 60163 'Tornado'.

Holly Cuthbert, 19, who works at Hopetown Darlington as a Welcome Team member and volunteers for The A1 Steam Locomotive Trust, achieved the milestone on September 27th 2026, becoming one of the youngest members of the team at just 19 years old.

She is also one of a growing number of women choosing to get involved in activities that have traditionally been male dominated and demonstrates that working with steam can be enjoyable for all.

Holly's achievement marks the latest chapter in an inspiring railway journey that began through the Young Producer programme facilitated by the National Lottery Heritage Funded Stockton & Darlington Railway 26 Mile Heritage Project, before she joined Hopetown's Welcome Team.

Her passion for railways first developed while studying at college, but it was seeing Tornado at York Station that sparked a lasting fascination with the iconic locomotive. Speaking about her journey, Holly said: "I saw Tornado in York Station and completely fell in love with it. I was fascinated by the locomotive and wanted to learn more about how these incredible engines operate."

Determined to pursue her interest further, Holly applied to volunteer with the A1 Steam Locomotive Trust (A1SLT), the organisation responsible for building and operating Tornado. Holly completed training around working safely around rail vehicles, such as how to work safely at height, and through her personal dedication and volunteering in her own time, she has progressed to become part of the locomotive's support crew.

Graeme Bunker-James, Trustee and Commercial Director at The A1 Steam Locomotive Trust said: "Holly's achievement symbolises the strong partnership between the Trust and Hopetown. It is pleasing to see people from all backgrounds becoming involved in railway preservation, and Holly's story shows what can be achieved through enthusiasm, hard work and dedication. It is especially pleasing that she is a local volunteer joining the team."

On September 27th 2026, coinciding with the 201st anniversary of the opening of the Stockton & Darlington Railway, Holly took her place alongside the Tornado team on Hopetown Heritage Railway, marking a significant milestone in her volunteering journey and showing that local people of all ages can get involved in heritage.

Councillor Libby McCollom, Cabinet Member for Local Services at Darlington Borough Council, said: "As we continue to celebrate Darlington's railway heritage, it is wonderful to see young people like Holly playing an active role in shaping its future. She is a credit to Hopetown, to the wider railway community and to Darlington, and I hope her story encourages other young people, especially young women, to explore the exciting opportunities available within the heritage, engineering and rail sectors."

Jessica Woodley, S&DR Youth Engagement Officer at the S&DR 26 Miles Project said: "Holly joined S&DR Young Producers as a young trainspotter with a keen interest in heritage. She brought her passion and expertise to the Young Producers 'Beyond the Tracks' exhibition and became a main presenter of the group's social media series. I'm so proud to see her continue her passion for heritage rail with such a fantastic achievement!"

Holly's story demonstrates how cultural and heritage projects can inspire young people and create pathways into volunteering, skills development and careers within the railway and heritage sectors. From helping shape activities as a Young Producer to welcoming visitors at Hopetown Darlington and now supporting the operation of one of Britain's most celebrated steam locomotives, Holly's journey is a remarkable example of where passion and determination can lead.

Holly's achievement reflects the growing role of women and young people within the heritage railway sector and highlights the opportunities available to the next generation of railway enthusiasts, engineers and heritage professionals.

APPEAL TO REBUILD MISSING VICTORIAN ENTRANCE CANOPY TO COMPLETE RESTORATION OF CORFE CASTLE

SWANAGE RAILWAY

Dedicated Swanage Railway volunteers have launched an ambitious £60,000 appeal to rebuild a distinctive wooden Victorian entrance canopy - demolished by British Railways in the 1950s - and complete the restoration of the Grade Two listed Corfe Castle station. Designed to protect train passengers from the rain on the forecourt side of the station, the structure above the entrance to the booking hall was part of the Purbeck stone building constructed in 1884 ahead of the opening of the ten mile Wareham to Corfe Castle and Swanage branch line in May, 1885.

The Corfe Castle Station Canopy Appeal is being led by David Scott - the deputy station master at Corfe Castle and a dedicated Swanage Railway volunteer for more than 11 years - who lives in the picture postcard Isle of Purbeck village.

David Scott explained: “We are hoping that the public will be able to help us complete the missing piece in the restoration of the much loved Corfe Castle station – a protected Grade Two listed building – that was started by dedicated Swanage Railway volunteers in the early 1990s when their relayed tracks reached the village.

“The canopy was an important practical and architectural feature and its removal in the mid-1950s – probably due to the wood it was made of becoming rotten and British Railways being unwilling to repair and restore it – left the entrance to the forecourt car park side of the station somewhat bare and exposed to the weather.

“This is an exciting project and a chance to make Corfe Castle station complete again by fully returning the building back to the way that it looked when the first train ran on the new Swanage branch line in May, 1885, when Queen Victoria was on the throne and William Gladstone was the British prime minister,” added David.

Drawings for the new Victorian-style canopy have been produced by architect Peter Smith to a design that closely follows the original while specialist contractors Target Structural have been engaged to guide the Swanage Railway with professional advice for the project.

David added: “Beautifully built of Purbeck stone and located in the Corfe Castle village conservation area, the historic Grade Two listed station is of special architectural interest and the jewel in the crown of the Swanage Railway. Our canopy appeal is a chance for the public to help make the station complete again in the building’s 141st year and the 50th anniversary of restoration work starting on the disused railway at a boarded up Swanage station in 1976.

“Valued and appreciated donations can be made by Internet banking, by bank transfer, by cheque or on-line via Enthuse while donations can also be made with Gift Aid - if the donor is a United Kingdom taxpayer – which adds 25 pence to every £1 donated at no extra cost to the donor,” explained David.

British Rail closed Corfe Castle station on Monday January 3rd 1972 - when trains ceased on the ten mile branch line from Wareham to Swanage – with the windows boarded up and the Victorian building being left to face an uncertain future. The railway tracks through Corfe Castle were lifted, by British Rail contractors, during the summer of 1972 with the disused trackbed being used by residents for walking their dogs.

It was in the summer of 1990 that determined Swanage Railway volunteers relayed the tracks through Corfe Castle, from Harman’s Cross, with the first passenger-carrying steam trains running from Harman’s Cross to Corfe Castle and Norden in August 1995. Donations to the Corfe Castle Canopy Appeal can be made by Internet banking or bank transfer to Barclays Bank, Poole, Dorset, quoting account 60539112, sort code 20-68-79 and including the reference Corfe Canopy.

Cheques can also be made payable to the Swanage Railway Company – and quoting Corfe Canopy – should be sent to the Swanage Railway finance department, Station House, Swanage, Dorset BH19 1HB which can be emailed at finance@swanagerailway.co.uk.

Donations to the Corfe Castle Canopy appeal can be made on-line via Enthuse at swanagerailwaytrust.enthuse.com/corfecanopy.

Supporters can Gift Aid their donations - if the donor is a United Kingdom taxpayer – which adds 25 pence to every £1 donated to the Swanage Railway at no extra cost to the donor.
Further details can be found at https://www.swanagerailway.co.uk/corfe-castle-station-canopy-restoration-project which includes a link for making a donation via Enthuse.

ALL ABOARD FOR A MAGICAL CHRISTMAS AT GREAT CENTRAL RAILWAY

From much-loved steam train journeys with Santa to festive dining and unique gift ideas, Great Central Railway (GCR) is getting ready to celebrate the most wonderful time of the year with a packed programme of seasonal experiences for all ages.

With something to suit everyone, visitors can make lasting memories at Britain's only double-track, main line heritage railway, whether enjoying a festive family day out, celebrating with friends or treating someone special.

Santa Express

A firm favourite in the GCR calendar, the much-loved Santa Express returns from November 28th to December 24th, bringing a little extra magic to the festive season.

Families can climb aboard a beautifully decorated steam train to meet Santa, Mrs Claus and their mischievous elves for a journey filled with Christmas songs, storytelling and seasonal surprises. Every child will receive a specially curated Christmas Activity Pack and a personal gift from Santa, alongside festive drinks and treats.

There are plenty of little extras for grown-ups to enjoy, too, including a complimentary Irish Cream Liqueur and mince pie, while taking in the winter scenery of the Charnwood countryside.

The journey includes a stop at Leicester North, where families can enjoy a photo opportunity with Santa in front of the locomotive, meet the elves and visit the tearoom. The train will also pause on the spectacular Swithland Viaduct, offering a memorable view of the surrounding countryside.

Festive Dining

GCR will also be serving up a selection of festive dining experiences throughout the season, with options including Festive Afternoon Tea, Christmas Midlander Friday lunches, Christmas Jubilee weekend services and Christmas Forrester Saturday evening dining.

For something with a little more intrigue, the Christmas Murder Mystery will take place on selected Friday evenings in December, combining festive food with an entertaining whodunnit to solve. Further seasonal dining will also be available to ring in the New Year, giving visitors plenty of opportunities to celebrate on board a heritage train.

Festive Gifting

Looking for a Christmas present with a difference? Great Central Railway gift vouchers offer the chance to give someone a memorable experience, from a special train journey or dining experience to the ultimate railway gift: a Drive a Train Experience.

A lifelong ambition or childhood dream for many, the experience puts recipients in the cab of a real heritage locomotive, giving them the chance to get behind the controls and discover what it's like to drive a working heritage railway. It's a gift that promises to create memories long after Christmas is over.

For those who love keeping up with the railway all year round, a GCR Patreon membership also makes a great alternative gift. Supporters receive benefits including early access to videos, behind-the-scenes insights, exclusive updates and opportunities to take part in Q&A sessions, offering a unique glimpse into life at the railway.

Tickets for festive services, gift vouchers, Driver Experiences and GCR Patreon memberships are available through the Great Central Railway website. With popular experiences expected to attract plenty of interest, visitors are encouraged to book early to secure their perfect Christmas gift.

Wensleydale Railway reveals new passenger train livery

Wensleydale Railway has revealed the new livery of its Class 142 diesel multiple unit passenger train - 'Northern Spirit'. The Northern Spirit livery was a distinctive turquoise and lime green paint scheme introduced in 1998 for the Regional Railways North East franchise operated by Merseyside Transport Limited. MTL was bought by Arriva in 2000, and the franchise rebranded as Arriva Trains Northern in 2001.

The Class 142 diesel unit, number 142 060, arrived at Wensleydale Railway in 2020. Since then, it has regularly carried passengers on their Leeming Bar to Leyburn services. The unit was moved into the Leeming Bar engineering shed in May of this year and a small team of volunteers and staff carried out cosmetic bodywork repairs and then repainting. It operated its first passenger service in its new livery on Saturday October 17th.

George Stephens, Operations Assistant at Wensleydale Railway said: "I qualified to drive this unit in 2025 and thoroughly enjoyed being part of this project. It's great to be able to give the unit a new lease of life and as far as I know, this is the only preserved train in Northern Spirit livery on a heritage railway."

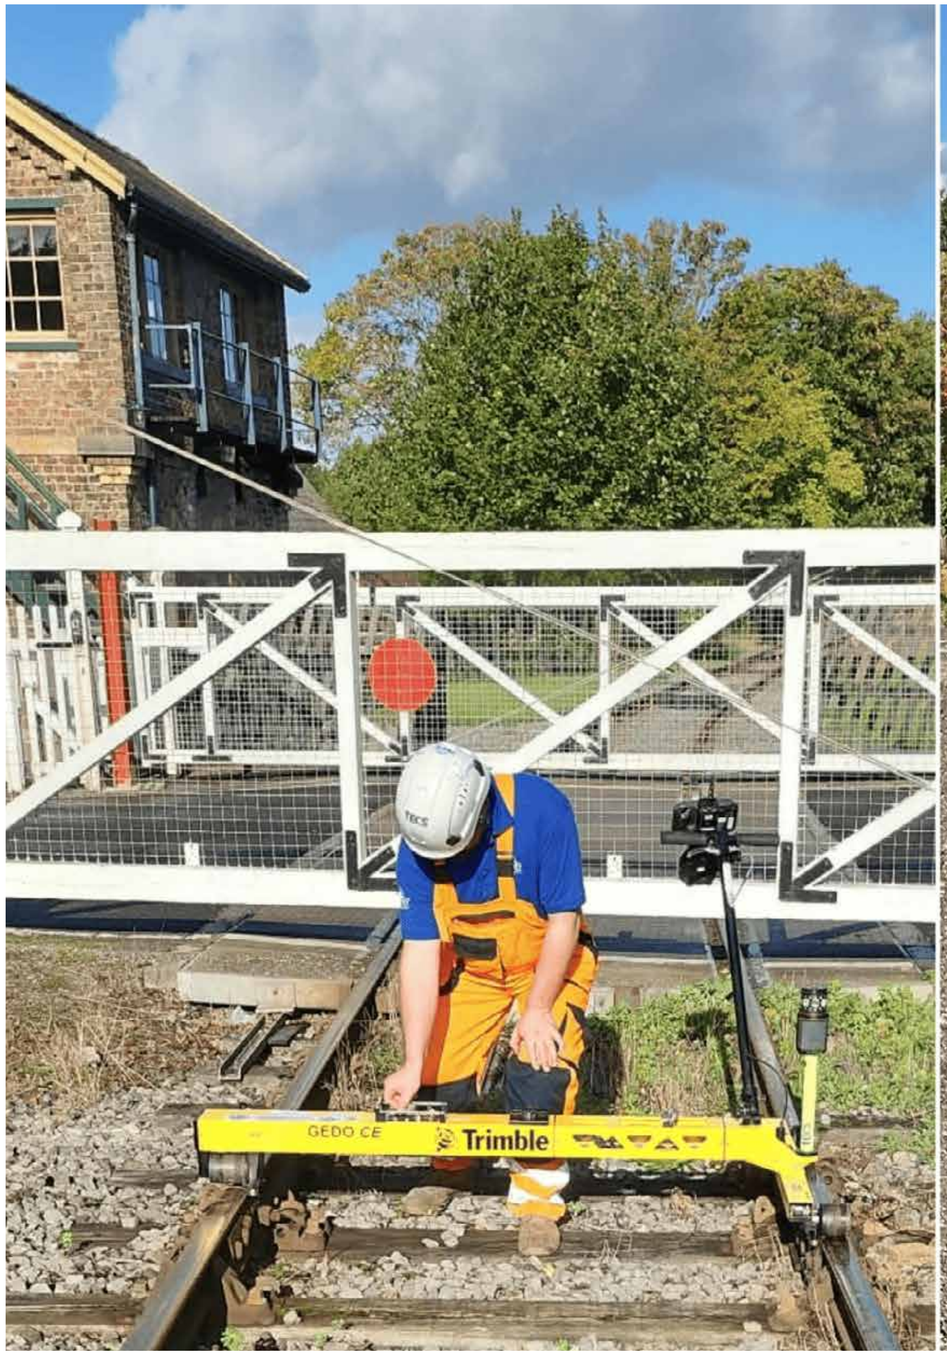

Nick Keegan, Marketing and Fundraising Manager at Wensleydale Railway said: "We'd like to thank everyone who supported this project. It's another example of the excellent work that our small team of volunteers and staff do and we're very grateful to them. In the last couple of years, our engineering team have completed various projects including the refurbishment and repainting of passenger coaches and the bodywork repairs and repainting of 3 diesel locomotives. As a result, they have developed quite a reputation within the railway enthusiasts' community for their high-quality work."

He added: "There's no shortage of on-going maintenance work required to keep our locomotives and rolling stock in top condition. If you fancy working on interesting projects like this, please come and volunteer with us!"

Wensleydale Railway receives pro bono track design support from Essex based rail and engineering company

3 staff from Track Engineering Construction Services (TECS) Ltd visited the Wensleydale Railway between October 12th and 14th, gathering high-quality survey data of Leeming Bar yard and Bedale station curve. The work was kindly undertaken free of charge by TECS. Using data gained from the surveys, the Essex-based firm has also offered to complete the necessary track design work for the Leeming Bar yard remodelling and Bedale station track relay.

Commenting on his visit to the railway, John Seaton, Land Surveyor at TECS said: “It was a great place to work and interesting to learn more about the Wensleydale Railway.”

Mat Powroznyk, Senior Track Design Engineer at TECS added: “I’ll be assisting with the designs for a reconfigured layout at Leeming Bar yard and a renewal of the track through Bedale station, where a sharp curve alongside the platform makes for an interesting challenge. After 15 years as a track designer, it’s genuinely rewarding to put that experience towards a heritage line that depends on people giving their time and skills. It’s a reminder of why I enjoy this profession.”

Jon Trueman, Industry Partner Manager at Wensleydale Railway said: “This collaboration between the Wensleydale Railway and TECS Ltd will support vital projects to improve safety and efficiency at our Leeming Bar engineering base, and to ensure that the tightly-curved platform interface at Bedale remains resilient and fit to use. We’re very grateful to TECS Ltd for their support.”

TECS Ltd is a fully multidisciplinary Rail and Civil Engineering company, delivering complete project solutions across the full lifecycle, from surveys and design to construction, monitoring, and handover. By combining in-house expertise with a hands-on delivery approach, TECS Ltd provide clients with technically robust, safe, and dependable outcomes — helping them achieve projects on time and within budget.

Further information on Wensleydale Railway’s Industry Partnership Programme can be found on their website: https://wensleydale-railway.co.uk/industry-partnerships/
